

Search for a Real Property – Criteria

Overview

The Property Accountability module Real Property process provides the ability to receive, update, transfer, and dispose of land, structures, and improvements with the exception of movable machinery and equipment. The key is that land must be involved; structures without land are not typically considered real property in and of themselves.

Note

When adding Real Property assets to the database, only add, transfer, update or dispose of one asset at a time.

There are three ways to receive new RP on the property book:

- New purchase
- Transfer from another UIC
- Construction In Progress (CIP) transfer

DoD Financial Management Regulation 7000.14-R (FMR) directs the relationship of CIP to RP. When authorization to construct RP is received, and the CIP project is opened, the sponsoring entity will request and assign a Real Property Unique Identifier (RPUID). This RPUID is recorded in the RP Registry. When the construction is complete and the property is accepted, this RPUID will be assigned to receive the new RP on the property book.
