

Stock Item Individual Issue Location Overview

Overview

The Warehouse Management module Stock Item Individual Issue Location process provides the ability to manage stocking levels and a replenishment method. This is required as part of the setup for Individual Issues. Only locations configured using this process are available to stock items available in Individual Issue.

Navigation

WAREHOUSE MGMT > Stock Item Individual Issue Location > Stock Item Individual Issue Location page

Procedures

Search for a Stock Item Individual Issue Location

One or more of the Search Criteria fields can be entered to isolate the results. By default, all results are displayed. Selecting  at any point of this procedure returns all fields to the default "All" setting.

- In the Search Criteria panel, narrow the results by entering one of the following optional fields.

- Select . The results appear in the Stock Item Individual Issue Location Search Results grid.
