## Accident Repair Cost Amount

The cost (USD) incurred during the current (reporting) year to repair damage to a vehicle and return it to service, less any reimbursement from another party (e.g., insurance claim or third-party payments). Reimbursement should be reported in the year money is collected, which may not be the same as the year of accident due to normal processing lag. If the vehicle has been disposed of, reimbursement will not be reported. For leased vehicles, accident related costs billed by the lessor in relation to a damaged vehicle would be reported as Lease Cost (OC-7).

**Note**

Maximum reasonable value: 50% of Acquisition Cost (OC-1); accident repair costs will only be checked against this limit for vehicles designated as agency owned in Ownership Type (OW-2) and with Acquisition Cost (OC-1) greater than \$5,000

<b>Data Type:</b>	Alpha-Numeric (A/N)

#### Field values:

Code	Value	Definition
<b>COND</b>	Condemnation	The acquisition of an interest in real property by the U.S. Government by the taking of non-Federal (generally private) property for federal public use through the use of judicial proceedings with required payment of just compensation rather than direct purchase. A condemnation can result in the government acquiring any property interest including fee, leasehold or servitudes such as easements.
<b>CONS</b>	Acquisition by Construction	The acquisition of an interest in real property by the U.S. Government by the erection, installation, or assembly of buildings, structures or linear structure including the installation of equipment and utilities

		made a part of the real property. Construction also includes related site preparation, excavation, or other preparation of the land. It excludes installation and relocation of severable property and minor modifications necessitated by the installation or relocation of such severable property.
<b>DONA</b>	Donation	The acquisition of an interest in real property by the U.S. Government by a voluntary (gift) no cost transfer of real property to the government. The gift may be conditional (e.g., for military use) or unconditional.
<b>FGHN</b>	Foreign Government / Host Nation	The acquisition of an interest in real property by the U.S. Government defined by a bilateral or multilateral agreement of a visiting military force deployed in the territory of foreign government/host nation.
<b>IADJ</b>	Inventory Adjustment (RPI Adjustment)	The addition of a real property asset into the inventory of the government that was previously not recorded and the actual acquisition method is unknown. This method is known as 'found on site' and requires supporting documentation of a DD Form 1354.
<b>JVEN</b>	Joint Venture	The acquisition of an interest in real property by the U.S. Government by a mutually beneficial partnership agreement between a Military Department or WHS and a private entity, where equity interest in a project is shared for a specific business purpose.
<b>LEAS</b>	Lease	The acquisition of a real property interest by the U.S. Government from a private entity by contract or agreement that grants right of exclusive use or occupancy (usually for a specified term) of real property in exchange for a specified consideration (rent or other remuneration).

## Help Reference Guide

<b>OA</b>	Occupancy Agreement	The acquisition of an interest (use) in real property by the Department of Defense (DoD) for GSA-controlled space (government-owned or leased by GSA for the Customer).
<b>PUR</b>	Purchase	The acquisition of an interest in real property by the U.S. Government based on payment of some form of consideration, the right of ownership of real property that is generally transferable and includes some aspect of control over the property. The level of control will depend on the nature of the interest acquired; as an example, an easement allows control for the purposes of the easement while a fee interest will include total control of the property.
<b>REV</b>	Reversion	The regaining of an interest in real property by the U.S. Government based on the occurrence of a qualifying event; all interests in the property previously given by the government to others has terminated. The reversion may be automatic or it may require the action of the holder of the reversionary interest to affirmatively enforce the reversion.
<b>TRNS</b>	Transfer between Federal Land Holding Agencies	The acquisition of an interest in real property by the Department of Defense (DoD) for custody and control of said real property that is owned by the U.S. Government and was previously controlled by another federal agency.
<b>WDPD</b>	Withdrawn from Public Domain	The acquisition of an interest (use) in real property by the Department of Defense (DoD) of federal lands administered by the Department of the Interior (DOI) that have been withdrawn from the public domain and reserved for specific use by DoD. The DoD exercises jur-

		isdiction over the lands under the terms of a Public Land Order (PLO), Executive Order (EO), or Public Law (PL).
<b>XCHG</b>	Exchange	The acquisition of an interest in real property through an exchange transaction in which all right, title, and interest to the real property asset is conveyed to the DoD (acting on behalf of the U.S. Government) by a non-federal entity in exchange for interest in real property that is conveyed from the DoD to the non-federal entity. If the fair market value of the real property to be exchanged is not equal, the recipient of the property having greater value pays to the other an amount equal to the difference in the fair market values.

## Acquisition Organization Code (Acq ORG CD)

A code used to identify the organization responsible for funding (Acquisition Fund Source Code) the acquisition of the legal interest in the real property asset.

<b>RFTAG</b> —	Radio Frequency Tag
<b>ONLIN</b> —	Online
<b>Space</b> —	None

# Automatic Identification Technology (AIT) Location

Identifies the physical location where an asset was inventoried by the PDCD.

## Field Details:

<b>DPAS Refer-ences:</b>	
<b>Field Struc-ture:</b>	Enter alphanumeric (alphabetic "A" through "Z", numeric "0" through "9") characters, or the following permitted special characters: \$, -, /, #, &, ;, comma, period, and space.
<b>Field Length:</b>	20
<b>Data Type:</b>	Alpha-Numeric (A/N)

## Automatic Identification Technology (AIT) Quantity

Identifies the quantity inventoried and entered into the PDCD.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	6
<b>Data Type:</b>	Numeric (N)

## Automatic Identification Technology (AIT) Subordinate Location

Identifies the subordinate location where an asset was inventoried.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	Enter alphanumeric (alphabetic "A" through "Z", numeric "0" through "9") characters, or the following permitted special characters: \$, -, /, #, &, ;, comma, period, and space.
<b>Field Length:</b>	20
<b>Data Type:</b>	Alpha-Numeric (A/N)

## Automatic Identification Technology (AIT) User Identifier

Displays the Automatic Identification Technology user for the Inventory Header Inquiry Detail.

### Field Details:

### UIT Interface Transaction Report —

WPHRR18

The UIT Transaction Report, WPHRR18D, is generated in the UIT Transaction interface batch report process.

The Report consists of any daily transactions, beginning inventory transactions, and delete transactions for each UIC identified in DPAS as UIT reportable.

This process will be generated with each daily processing of the UIT Script.

A different report will be generated for each Accountable UIC with page breaks for each reportable UIC under the Accountable UIC.

All changes to an existing UIT record will be written to Part I of the report.

These records will have an ind\_cd=10 on the UIT Interface table.

Beginning Inventory Transactions will be written to Part II of the report.

These records will have an ind\_cd = 30 on the UIT Interface table.

Any UIT Record that needs to be removed from the registry (Deleted Transactions) will be displayed in Part III of the report.

These records will have an ind\_cd = 40 on the UIT Interface table.

<p><b>UIT Reconciliation Report —</b></p>	<p>WPHRR40</p>	<p>This report consists of all reportable assets by UIC.</p> <p>A different report will be generated for each Accountable UIC with a page break for each reportable UIC under the Accountable.</p> <p>This report will be generated upon request though the UIT Reconciliation Request Process or from the Semi-Annual Reconciliation process.</p> <p>If a reportable UIC does not have any reportable assets, a Negative report will be generated for that UIC.</p>
<p><b>Utilization Interface Import Report —</b></p>	<p>WPUTR15</p>	<p>This process supports reporting of imported service life data.</p> <p>Input files are received and the data is processed by a specific business partner input process and WPUTI04 processes.</p>

# Army Enterprise Materiel Master (AEMM)

Provides the Army a single authoritative source for Materiel data supporting all Army constituent (modernized and legacy) systems.

Provides the catalyst to manage, control, create, change, archive, and validate data, while providing a single global view of Materiel thus, providing the basic building blocks for Product Lifecycle Management/Weapon System Management.

Implementation has enabled inventory management, accountability, pricing, accounting functions, and Materiel Requirements Planning (MRP) operations to be seamlessly integrated into the Army Enterprise vision.

The AEMM is housed and enabled by AESIP.

# Asset Control Code (ACC) – Standard Financial Information Structure (SFIS)

The code that identifies the accounting class of assets within the Standard Financial Information Structure (SFIS) layout which is being used for the importation of data. The codes displayed are conditional based upon the Type Asset Code selected. It is critical the proper code is selected because it identifies the accounting class of the asset. This information passes to the accounting systems for use in preparing financial statements. If the wrong code is chosen, the accounting transaction may be rejected or passed incorrectly.

The codes reflect data values and structures from the SFIS, which are imported into the Defense Property Accountability System and provide the metadata to assist the technical staff in developing the import process.

- Auto
- Generator
- Lightset
- Construction
- Hand Tools

#### Field Details:

<b>DPAS Refer-ences:</b>	
<b>Field Struc-ture:</b>	Enter alphanumeric (alphabetic "A" through "Z", numeric "0" through "9") characters, or the following permitted special characters: \$, -, /, #, &, ;, comma, period, and space.
<b>Field Length:</b>	125
<b>Data Type:</b>	Alpha-Numeric (A/N)

# Asset Disposition Types

One of the nine kinds of asset dispositions.

**Field values:**

Code	Value
<p><b>Administration Adjustment Report (AAR)</b></p>	<p>Corrects minor discrepancies in the inventory/property book. Examples include:</p> <ul style="list-style-type: none"> <li>• Discrepancy in make, model or size;</li> <li>• Incorrect stock number between what was ordered and what was received;</li> <li>• An incorrectly recorded asset; change from accountable to non-accountable asset;</li> <li>• Changes due to Agency documentation changes, e.g., new regulation.</li> </ul> <p>(The AAR is not to be used for serial number changes, and should not be used in place of more specific disposal actions such as a Report of Survey or Inventory Adjustment.)</p>

<p><b>Disposal</b></p>	<p>Removing assets from use and placing them out of service with the appropriate activity or agency, e.g., the Defense Logistics Agency Disposition Services.</p> <p>(The Turn-In and Disposal action types can be used interchangeably. Check with your Agency Coordinator to determine which action your site should use.)</p>
<p><b>Donated</b></p>	<p>Giving an asset away with no consideration in return.</p> <p>Assets can be donated to other Federal agencies, to state, city or other local authority, or to certain authorized programs.</p>
<p><b>Inventory Adjustment</b></p>	<p>Corrects a discrepancy found by inventory of items missing from the accountable property record.</p> <p>An inventory number is required on the DPAS screen to document why the asset is being disposed.</p> <p>This is a method of correction when others have failed – no disposal or turn-in records can be found, no one is found at fault, and the asset simply cannot be found.</p>

**Loan Return**

Borrowed assets are the responsibility of the receiver, who also assumes liability for them.

The receiving Agency is expected to return loaned assets in acceptable condition, or repair, replace or reimburse for lost or damaged items.

There is usually a loan agreement which states the borrowing Agency's responsibilities.

The lender can be either contractor or another Government Agency.

**Note:** you may want to enter "RETURNING LOANED ASSET" in History Remarks.

**Report of Survey**

**(ROS)**

Documents the circumstances concerning the loss, damage, or destruction of Government property and serves as, or supports a voucher for adjusting the property from accountable records.

It also documents a charge of financial liability assessed against an individual or entity, or provides for relief from financial liability.

(From AR 735-5)

<p><b>Sales</b></p>	<p>Conveying ownership or title to property to another for a price.</p> <p>In DPAS terms, this includes having the right to do direct sales to the public, usually by auction, to recoup some of the original cost of the asset.</p> <p>It also includes what used to be called Cash Collection, when an employee was held liable for the loss, damage or destruction of an asset and was directed to reimburse the agency for the fair market price of the asset.</p>
<p><b>Turn-In</b></p>	<p>DPAS uses this term to differentiate from disposal.</p> <p>A disposal goes directly to the Agency in charge of disposition, e.g., DLA Disposition Services or General Services Administration (GSA).</p> <p>An asset that is turned in goes to an intermediate agency or activity, such as the IT department, or the National Capital Region, who reutilizes or otherwise distributes the asset, or documents the asset and disposes of it to the appropriate agency.</p> <p>It can be considered an intermediate step to disposal.</p> <p>(The Turn-In and Disposal action types can be used interchangeably. Check with your Agency Coordinator to determine which action your site should use.)</p>

**Transfer Out**

**(out of DPAS)**

Conveys the right or title of property to another.

In DPAS terms, this means the ownership of an asset changes to an agency or activity that is not on DPAS.

It could be to another Federal agency not on DPAS, or to a state, city or local authority, or another authorized program.

### Asset Serial Number (Asset SERIAL NBR)

## Automatically Dropping Assets Through the Excess Process

Bulk-managed assets are not dropped from DPAS by DAISY. *That decrease action must be performed manually.* Assets marked as Condition Code = A – H and with a value less than or equal to \$800 may be “batch-lotted” by DRMO and will not be dropped automatically from DPAS. *That decrease action must be performed manually.* If the quantity of assets received by DRMO for a particular Document Number (DD Form 1348-1A) does not match the quantity of assets physically turned in, none of the assets will be automatically dropped by DPAS. *That decrease action must be performed manually.*

### Field values:

Acronym	Meaning	Definition
<b>DRMS</b> —	Defense Re-utilization and Marketing Service	Organization providing Department of Defense (DoD) units worldwide with critical disposal services for materiel no longer needed for national defense. # Base Supply Department of Defense Activity Address Code (DoDAAC)

A unique identifier for the base supply being used by the maintenance activity.

A distinctive code assigned to identify specific units, activities and organizations, NON-DOD and contract activities engaged in the requisitioning, receiving, and billing of materiel.

Code can be any number or letter, except the letters I and O.

Sending DoDAAC in the Supply Export process is the DoDAAC for the Accountable Unit Identification Code (UIC) of the site that is sending data from DPAS to SARSS.

Receiving DoDAAC in the Supply Export process is the DoDAAC for the SSA that is responsible for processing SARSS for the DPAS site submitting the data.

Receiving DoDAAC in the increase/decrease processes is the DoDAAC of the UIC gaining an asset.

Holding DoDAAC in the Excess Actions Add/Change and Excess Non Property Add/Change is the DoDAAC where the asset is being held when the asset is marked as excess.

## Budget Line Item (BLI)

A budget in which the individual financial statement items are grouped by cost centers or departments. It shows the comparison between the financial data for the past accounting or budgeting periods and estimated figures for the current or a future period.

For the procurement appropriations, the budget line item (BLI) values are captured in a table to make them available to BI for reporting purposes.

### Field Details:

### Budget Line Item (BLI) / Price Earnings (PE)

A budget in which the individual financial statement items are grouped by cost centers or departments. It shows the comparison between the financial data for the past accounting or budgeting periods and estimated figures for the current or a future period.

For the procurement appropriations, the budget line item (BLI) values are captured in a table to make them available to BI for reporting purposes.

The price to earnings ratio (PE Ratio) is the measure of the share price relative to the annual net income earned by the firm per share. PE ratio shows current investor demand for a company share. A high PE ratio generally indicates increased demand because investors anticipate earnings growth in the future. The PE ratio has units of years, which can be interpreted as the number of years of earnings to pay back purchase price.

### Bulk

Bulk assets are items that are not tracked with serial numbers.

A bulk asset's Asset Id should not change unless something that physically identifies the item is updated in the data base. For example, a chair - no matter who owns the chair or where the chair is, it is still a chair. It should have the same Asset Id, and any like chair will also have the same Asset Id.

Bulk assets are identified in DPAS by three internal "keys" which each have a different number of data elements. It is impossible to match up just a few data elements from the scanner to the dozen elements that are in the DPAS Asset Master table, so a decision is made as to what is correct and who will perform the reconciliation.

When the assets are scanned or manually counted in an inventory, and the numbers match exactly to the corresponding number that was initialized, there is an instant reconciliation. However, if the inventory number of bulk assets does not exactly match the initialized quantity, the result is an overage (the number counted) vs. a shortage (the number initialized). That is where the user enters the process and has to access to the reconciling inventory portion of DPAS.

### Calibration / Maintenance / Inspection / Test at Parent Unit

Identifies if the associated components respective dates are no different than the header/end item and will be Calibrated, Maintained, Inspected, and/or Tested in tandem with the header/end item.

If False it will mean the associated component can have different Calibration, Maintenance, Inspection, and/or Test dates than the header (or parent). Just because the flag is False does not mean the components dates will differ entirely it just means that they can be different. If checked then true, otherwise false.

### CAMS Interface

A Yes/No field indicating whether an asset is reportable to the Capital Asset Management System — Military Equipment Valuation (CAMS-MEV) initiative. This field is only functional on assets that have a Type Asset Code of **M** for Military and a Management Code of **A** for serially managed assets only.

Military equipment required to be reported through this interface must meet the following definition:

Weapon systems that can be used directly by the Armed Forces to carryout battlefield missions. Military equipment has an expected useful life of two or more years, is not intended for sale in the ordinary course of business, does not ordinarily lose its identity or become a component part of another article, and is available for the use of the reporting entity for its intended purpose. Examples include combat aircraft, pods, combat ships, support ships, satellites and combat vehicles. Excluded are training aircraft and simulators.

<b>PD —</b>	Base Contracting uses this code to indicate that items have been delivered to the pier (port of embarkation).
<b>RW —</b>	Inspection uses this code to identify delayed local purchase Receipts that contain discrepancies.
<b>Z1 —</b>	Cancellation of CE BEAMS due-out.
<b>Z2 —</b>	Applies to overseas Standard Procurement System (SPS) activities only. Foreign Service Procurement Determination (FSPD). To have procurement action completed, the requesting organization must provide justification. See management notice F467 for more information.
<b>Z3 —</b>	Procurement action cannot be taken until a valid description is provided to

	Contracting. See management notice F468 for more information.
<b>Z4 –</b>	Procurement action cannot be taken until additional data description is provided. See management notice F469 for more information.
<b>Z5 –</b>	The due-in was cancelled as the result of an automatic sourcing decision by ES-S. A new due-in with a lateral source was created by ES-S to fulfill the requirement. This status code will not be used on manual inputs for any reason. .
<b>Z6 –</b>	A cancellation has been generated offline to correct a due-in or due-out detail for Receipt or due-out release processing. See management notice F456 for more information.
<b>Z7 –</b>	The due-in was canceled as the result of three follow-ups with no response. The due-in is deleted on the fourth follow-up. Also used for cancellation of due-in without source of supply status confirmation.
<b>Z8 –</b>	Reserved for internal system control. Assigned to claims receivable detail to identify shipment apparently lost in parcel post shipment. Assigned by Accounting and Finance (A&F) programs.
<b>Z9 –</b>	Reserved for internal system control. Assigned to claims receivable detail to identify shipment apparently lost in transportation channels. Assigned by A&F programs.
<b>ZA –</b>	This code applies to Prepositioned Materiel Receipt (PPMR) reversal action by initiating source. These PPMR inputs will be internally reformatted into MILSTRIP cancellations AE1/ZA and processed through status programs.
<b>ZB –</b>	The due-out has been canceled for lack of funds. Program generated.
<b>ZC –</b>	The customer has initiated a due-out cancellation request (AC1) to the source of supply through a REC TEX E input. Due-out canceled.

## Help Reference Guide

<b>ZD –</b>	Releveling programs have generated a requisition cancellation request to the source of supply.
<b>ZE –</b>	Contracting cannot buy the item because the description of the item is incomplete. See management notice I963 for more information.
<b>ZF –</b>	LRS/Materiel Management Activity has canceled the request before procurement.
<b>ZG –</b>	Item permanently not available from Base Contracting. REX code 1 assigned. REX code 2 will automatically be assigned at overseas bases, except bases in Alaska. See management notice I964 for more information.
<b>ZH –</b>	The item is temporarily not available from Base Contracting. REX code 1 assigned. See management notice I964 for more information.
<b>ZJ –</b>	Contract canceled by mutual agreement at the Air Force's request.
<b>ZK –</b>	Contract unilaterally canceled by the Air Force.
<b>ZL –</b>	Contract canceled by mutual agreement at the vendor's request.
<b>ZM –</b>	Contract unilaterally canceled by vendor due to failure to perform.
<b>ZN –</b>	Cancellation of a repair and return due-in because the repair activity was not able to repair the item. See management notice F450 for more information.
<b>ZO –</b>	Due-out cancellation of an obligated due-out.
<b>ZP –</b>	The quantity in positions 25-29 has been canceled.
<b>ZQ –</b>	The due-out was canceled through the S04 bench stock semiannual review.
<b>ZR –</b>	Canceled. The extended dollar value is greater than the maximum limit of a

	federal supply schedule. Requisition from appropriate GSA region.
<b>ZS –</b>	The due-out has been canceled through the daily or weekly review of due-outs.
<b>ZW –</b>	The due-out has been canceled through the monthly or quarterly validation of due-outs.
<b>ZU –</b>	The due-out has been canceled through the aircraft records validation required by AFI 21-101.
<b>ZX –</b>	The Awaiting Parts (AWP) due-out has been canceled because the end item has been turned in with Maintenance Action Taken Code (MATC) 4 (Not Repairable This Station (NRTS) due to lack of parts).
<b>ZY –</b>	Canceled. This requisition's dollar value exceeds the limitation for commodity assignment that overseas bases can purchase. Prepare an offline requisition with a new document number and current Julian date to the source of supply assigned responsibility for the commodity (GSA, DLA, or the applicable AF item manager).
<b>ZZ –</b>	Local Purchase Items Only. Requisition held in suspense awaiting additional obligation authority. See Stock Fund Manager to obtain additional obligation authority.
<b>99 –</b>	Follow-up Counter. Assigned by the retail supply system to record follow-up action on due-in details without status. The counter begins with "99" and decreases by one each time another follow-up transaction is created. For example, 96 would represent four follow-up transactions.

## Capital Codes

The code identifying the capital used for indicating whether or not an asset fits the requirements for a capital asset.

If the total cost of an asset is equal to or greater than the Capital Asset Threshold, illustrated by the chart below, the Depreciation (DEPRN) Code will equal "T".

**Note**

There may be exceptions to the limits above when determining if an asset is capital. The Capital (CPTL) Code field may be used to override these criteria. If the CPTL CD is "A", the Total Cost determines if the asset is capital as described in the chart below. "A" is the default value and refers to the Capital Threshold. If the CPTL CD is "S", the asset is considered capital when the total cost is less than the Capital Threshold. If the CPTL CD is "N", the asset is considered non-capital even though the Total Cost is over the Capital Threshold. Overriding the Capital Threshold is an exception and will potentially generate accounting transactions for the asset.

Cross Reference of Current Capital Asset Thresholds for DPAS Type Fund and Type Asset Codes.

Code	Value
<b>C – Contingency</b>	This is a materiel item which no longer fully satisfies U.S. Army operational requirements but which has residual value for use in training or as a MECI for reserve components.
<b>E – Exempt</b>	This classification is used to identify items not requiring type classification under AR 70-1.
<b>L – Limited procurement</b>	This is an additional type classification available for use under excep-

	<p>tional circumstances and is applicable only to developmental items.</p> <p>It is used when a materiel item is required for special use for limited time where a specified limited quantity will be procured without further intent of additional procurement of the item under this classification.</p> <p>Items designated for LP type classification are those which do not qualify for adoption as STD.</p> <p>These items are required to:</p> <p>(1) Meet urgent operational requirements, which cannot be satisfied by an item type, classified STD.</p> <p>(2) Obtain production items for test by establishment of a pilot production line, when the materiel acquisition decision process (MADP) decision authority approves conduct of additional tests as a prerequisite to type classification STD.</p>
<p><b>N – Non-type classified</b></p>	<p>This is assigned to items not yet type classified.</p>
<p><b>O – Obsolete</b></p>	<p>This is a materiel item that is no longer required or acceptable for U.S. Army use.</p>
<p><b>P – Low-rate Production</b></p>	<p>This is an additional type classification designation used when a low-rate initial production line is required prior to a full-rate production decision.</p> <p>LRP items are funded from the procurement appropriation and are part of the authorized operational inventory and may not be used for</p>

	<p>research and development tests.</p> <p>Items type classified as LRP must be reclassified as STD at the full-rate production decision point.</p>
<p><b>S – Standard</b></p>	<p>This is a materiel item determined to be acceptable for the mission intended, supportable in its intended environment, and acceptable for introduction into the Army inventory;</p> <p>or which is capable of being made acceptable, without further developmental effort, during production.</p> <p>This designation includes items which have been or are being replaced by new STD items but which are still acceptable for the intended missions.</p>

### Combat Essentially Code (CEC)

The Combat Essentially Code (CEC) indicates whether or not an end item is essential to the operational readiness of a weapon system or the conduct of a military mission; or that an end item is a functional part contributing to the tactical and essential operations of an end item component or assembly whose failure would render the end item inoperable or incapable of fulfilling its mission; or that a repair or secondary depot repairable component is required for the safety and health of personnel, or is required by state or local laws.

A comparison of the code for an NSN is made for each higher order equipment application within the Marine Corps supply system. The code actually recorded is the most critical numeric derived from the comparison.

### Common Logical Operators

In order to build useful queries, logical operators are required.

#### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	

#### Field values:

Logical Operator	Definition	Meaning and Use
=	Equal To	This option will find all entries that must match exactly. If you are searching for a "half ton truck" then a "three quarter ton truck" is not equal to your criteria.
<>	Not Equal To	This option will find all entries that does not match exactly. A "half ton truck" is not equal to a "three quarter ton truck". They are both trucks, but they are not equal. So if your extract criterion is "half ton truck" you will see everything except a "half ton truck".
<	Less Than	This option will find all entries that are lower in value than the value entered in the search criteria. In terms of letters, A is less than Z.

## Help Reference Guide

<=	Less Than or Equal To	This option will find all entries that are equal to or lower in value than the value entered in the search criteria.
>	Greater Than	This option will find all entries that exceed the value entered. In terms of letters, Z is greater than A.
>=	Greater Than or Equal To	This option will find all entries that are equal to or exceed the value entered.
<b>Like</b>	Like	<p>This option will find all entries when it is not the exact information. Like allows you to enter a portion of information and the search will find any occurrence of this character string anywhere in the field you have chosen in your search criteria.</p> <p>Like may also be used in conjunction with the wildcard character (%) to limit or expand the number of results in any search. Use of Like as a logical operator and the wildcard together tells the system "give me everything that is like anything". The system interprets that as "give me everything"!</p> <p>You can use the wildcard as a method to limit the number of results that are returned to you. Let's say you have a number of "meters" in your system. You know they are coded as measuring all sorts of things. The ones you are looking for measure voltage. You know that the word "meter" comes first but you don't know if it says "volt" or "voltage". You could use the Like option, enter "meter%-volt%" into the search criteria box and you would receive a list of everything that contained "meter" and "volt" in that order anywhere in the field.</p>

## Common Name

## Components

Components are sub-assemblies of an end item, the latter of which is called a Higher Assemblage when used with components.

Generally, components are physically embedded / contained within a Higher Assemblage asset (for example, a jet engine contained within an aircraft).

### Business Rules

- A Component cannot be a bulk asset.
- A Component cannot be on a different Custodian Nbr than its associated end item.
- The Location / Sub Location of a Component cannot be different than that for its end item.
- All lower-level components transfer / decrease with their associated end items (Higher Assemblages).
- The Embedded Cost check box for a component cannot be changed on a Transfer / Decrease.
- A Government Furnished Property (GFP) Contract Number for a component must be the same as the end item.
- A System Id of the Component must match the System Id of its end item.
- A Component cannot have a different Loan Cd than its end item.
- A Component cannot have a different Suspected Loss Cd than its end item.

**Determining the Structure of Components:**

Value	Definition
<b>EI</b> —	End Item with no Components
<b>EC</b> —	End Item with Components
<b>CC</b> —	Component with Components
<b>CL</b> —	Component Last Assemblage

**Related Processes:**

Process	Definition
<b>Transfers</b> —	When transferring an end item with components, all gaining transactions for the end item must be completed prior to performing a component gaining transaction.
<b>Dispositions</b> —	When end item (s) are deleted component(s) records are deleted along with the end item(s).

The following end item processes perform component validations before processing the transaction:

<b>Asset Disposition</b> —	Verifies asset with an Asst Lvl Cd has a value of 'CC', 'CL' or 'EC'.
<b>Asset Property Update</b> —	Verifies that the Asst Lvl Cd of the asset has a value of 'EC'.
<b>Asset Receiving</b> —	End item action must be completed first.
<b>Asset Reversal</b> —	Verifies that the asset being reversed has an Asst Lvl Cd that has a value of 'CC', 'CL' or 'EC'.
<b>Close Inventory</b> —	Verifies that the Asst Lvl Cd of the asset has a value of 'EC'.
<b>Excess Actions Transaction Update</b> —	Verifies that the Asst Lvl Cd of the asset has a value of either 'EC' or 'CC'.

<p><b>GFP Assignment —</b></p>	<p>Used whenever the Asst Lvl Cd of the asset being assigned has a value of either 'CC', 'CL' or 'EC'.</p> <p>If the Asst Lvl Cd has a value of either 'CC' or 'CL', its Asst Lvl Cd is modified to 'EC' or 'EI'.</p>
<p><b>Property Transfer —</b></p>	<p>Verifies that the Asst Lvl Cd of the asset has a value of 'EC'.</p>
<p><b>Update Inventory —</b></p>	<p>Verifies that the Asst Lvl Cd of the asset has a value of 'EC'.</p>

The application process is simple, just apply on-line and submit a Memorandum of Agreement (MOA). In addition, private and parochial schools and Non-Profit Educational Entities also need to complete and submit an End Use Certificate (EUC) and be approved through the Trade Security Control (TSC) Office. All MOAs must be current (the person who signed the MOA must still be employed by the school) before any computer equipment can be received by the school under the DoD CFL Program.

Request a list of all current categories of approved schools in your state: [DODCFL@dla.mil](mailto:DODCFL@dla.mil)

### Eligibility

Schools and educational nonprofit organizations located in the United States, the U.S. Virgin Islands, American Samoa, Guam, the Commonwealth of Puerto Rico, or the Commonwealth of the Northern Mariana Islands, can receive computer equipment through the CFL Program.

### Public Schools

The DoD CFL program authorizes the transfer of information technology (IT) assets to pre-kindergarten through 12th grade schools and educational nonprofit organizations. Once your school has applied and been approved for participation in the program, it's as easy as searching DLA Disposition Services inventory for IT equipment that meets your needs, and inputting the request. If a DoD activity does not require the Materiel during the first fourteen

## Help Reference Guide

days on inventory, the school is designated the equipment. The school will receive call(s) from the DLA Disposition Services site and/or the Turn-In Activity to inform them that the Materiel is available for removal and to schedule the removal.

### Note

The Materiel must be removed within fourteen (14) days of notification.

### Step One

To begin the registration process please contact [DODCFL@dla.mil](mailto:DODCFL@dla.mil)

### Step Two

Complete the Memorandum of Agreement (MOA) by clicking the hyperlink and return it via fax to (269) 961-5841 or it can be scanned and emailed to [DODCFL@dla.mil](mailto:DODCFL@dla.mil) (MOA must contain the printed name and signature of approving official.)

The Memorandum of Agreement is a binding document that identifies the roles and responsibilities of the Government and the School. Please be sure you read and understand the terms of the MOA before submission.

For any questions please contact the CFL Branch.

## Private/Parochial Schools

To apply for the CFL program, just follow the steps below. Private and Parochial schools are very easy to approve if your school is recognized through the National Center for Education Statistics. Once your school has applied and been approved for participation in the program, it's as easy as searching DLA Disposition Services inventory for IT equipment that meets your needs, and inputting the request. If a DoD activity does not require the Materiel during the first fourteen days on inventory, the school is designated the equipment. The school will receive call(s) from the DLA Disposition Services site and/or the Turn-In Activity to inform them that the Materiel is available for removal and to schedule the removal.

### Note

The Materiel must be removed within fourteen (14) days of notification.

### Step Two

Complete the Memorandum of Agreement (MOA) by clicking the hyperlink and return it via fax to (269) 961-5841 or it can be scanned and emailed to DODCFL@dla.mil

(MOA must contain the printed name and signature of approving official.)

The Memorandum of Agreement is a binding document that identifies the roles and responsibilities of the Government and the School. Please be sure you read and understand the terms of the MOA before submission.

Some IT equipment requires a higher level of approval. These are generally computers with a Pentium 3 or higher processor. Because of this, this type of equipment is subject to Export Controls. If a computer is on the export control list, some educational institutions will require a Trade Security Control clearance prior to being approved. In order for Private and Parochial schools to receive these computers, applicants must complete an End Use Certificate (EUC) for review and approval.

### Step Three

Applicants must submit one of the following forms of identification: US Government ID, US Passport, Valid Drivers License, State Government ID Card, Green Card, Visa, or Naturalization Papers.

For any questions please contact the CFL Branch.

## Non-Profit Entities

The General Services Administration developed guidelines for DoD agencies to follow when transferring excess computer equipment to educational nonprofit organizations. Certain criteria is used to determine whether or not a nonprofit organization qualifies to receive DoD computer equipment under Executive Order 12999.

\*The organization must be non-profit as determined by the Internal Revenue Service under section 501(c) of the United States Tax Code.

\*The organization must operate exclusively for the purpose of education.

\*The organization must serve pre-K through grade 12 students only.

Once your school has applied and been approved for participation in the program, it's as easy as searching DLA Disposition Services inventory for IT equipment that meets your needs, and inputting the request. If a DoD activity does not require the Materiel during the first fourteen days on inventory, the school is designated the equipment. The school will receive call(s) from the DLA Disposition Services site and/or the Turn-In Activity to inform them that the Materiel is available for removal and to schedule the removal.

## Condition Code %

The percentage of the materiel, determined by Stock Number, for degree of serviceability, condition, and completeness in terms of readiness for issue, and to identify actions underway to change status of materiel.

This is determined when the Stock Number is originally set up, and only applies to Stock Numbers with a Type Asset Code of O — Operating Materiel & Supplies.

## Cost Variance Maximum Percentage

The percent value is entered by the user in the Master Date > Agency Settings.

This percentage is used to notify a user that the Acquisition Cost they entered for an asset is that percent or more above the Unit Price on the Stock Number record.

This may indicate the user has selected the incorrect Stock Number and should build or select a different one or it could indicate they have entered the Acquisition Cost incorrectly.

It could also indicate the Unit Price on the Stock Number needs to be updated due to a price increase.

# Data Universal Numbering System (DUNS)

The Data Universal Numbering System, abbreviated as DUNS or D-U-N-S, is a system developed and regulated by Dun & Bradstreet (D&B), that assigns a unique nine digit numeric identifier, referred to as a "DUNS number" to a single business entity. It was introduced in 1963 to support D&B's credit reporting practice. It is a common standard worldwide. DUNS users include the European Commission, the United Nations and the United States government. More than 50 global, industry, and trade associations recognize, recommend, or require DUNS. The DUNS database contains over 100 million entries for businesses throughout the world. To find your DUNS number, go to <http://smallbusiness.dnb.com>.

If you do not have a DUNS number, you can request one for free by either calling 1-800-333-0505 or registering online at: (<https://eupdate.dnb.com/default.asp>).

If you complete the online DUNS application, it takes approximately one week before the information is reflected in the Dun and Bradstreet web site. You can usually get your DUNS number faster if you call the toll free number.

### Days In Transit

The amount of time the asset is between sites. There are three ways to calculate the Days in Transit:

IF Receipt Quantity plus Discrepant Quantity is less than the Shipped Quantity, THEN Days in Transit equals the Initial Ship Date subtracted from the Current Date.

IF Receipt Quantity plus Discrepant Quantity is greater than or equal to the Shipped Quantity, THEN Days in Transit equals the Initial Ship Date subtracted from the Latest Receipt Date.

IF the record is Closed, THEN Days in Transit equals the largest amount of Days in Transit for the entire transaction.

## INSTRUCTIONS

1. The Production Representative will complete the top half of the report only. The report is to be typewritten, if possible. If not, assure all copies are legible. (The Production Representative will also enter the contract administration office address in the "Send To" block on the bottom half of the reverse side.)
2. If the anticipated or actual delay will be 30 days or less, the Production Representative will distribute the report as follows. Copies requiring mailing will be inserted into an envelope.
  - a. Two copies (last two pages) to the PCO.
  - b. One copy to the IM, or ICP, or SCA (except for ALCs).
  - c. One copy to the ACO.
  - d. One copy to the Production working file.
3. If the anticipated or actual delay will be more than 30 days, or the cumulative delay will exceed 30 days, the Production Representative will forward the complete set to the ACO. (Note: Unilateral Purchase Orders are exempt from ACO coordination.) The ACO will complete the bottom half of the report and distribute as follows. Copies requiring mailing will be inserted into an envelope.
  - a. Two copies (last two pages) to the PCO.
  - b. One copy to the IM or ICP, or SCA (except for ALCs).
  - c. One copy to the official file.
  - d. One copy to the Production Representative.
4. When block 12.e.(1) is marked, the date of issue, mutually agreed to by the ACO and Production Representative, will be inserted.
5. The PCO may use the bottom half of the perforated copy to acknowledge receipt of the report and to issue instructions. (The buying activity address will be entered in the return address portion of the mailer. The buying activity will pay the postage.)

<b>ROX —</b>	Report of Excess	The asset has been declared excess (Declaration of Excess) by DoD and a Report of Excess Real Property (SF 118) has been submitted to GSA for further action. The asset will no longer be depreciated and should be moved to GL account 1995. This status MUST precede statuses of DOS and XGSA.
<b>XGSA —</b>	Excessed to GSA	GSA has accepted the report of excess (SF 118); the property is subject to disposal by GSA; and the property is awaiting surplus determination (DOS) by GSA. The asset will no longer be depreciated and should be moved to GL account 1995. This status MUST precede status of DOS.

## Disposal Stock Number

The Disposal Catalog Stock Number.

The number assigned to each asset that is unique to a specific catalog within each logistics program.

The Stock Number process is at the Catalog level, whereas the Stock Item process is at the Warehouse level.

When a Stock Number is created, it is then configured for each Warehouse's specific stocking parameters. This is part of the Stock Item process.

Requisition – A unique NSN or Manufacturer Part Number that is used to identify the requested Requisition materiel.

## Disposition Stock Number

Identifies the asset marked as "Excess".

The Disposition Catalog Stock Number.

The number assigned to each asset that is unique to a specific catalog within each logistics program.

The Stock Number process is at the Catalog level, whereas the Stock Item process is at the Warehouse level.

When a Stock Number is created, it is then configured for each Warehouse's specific stocking parameters. This is part of the Stock Item process.

Requisition – A unique NSN or Manufacturer Part Number that is used to identify the requested Requisition materiel.

### Document Number (DOCUMENT NBR)

A unique reference number either automatically or manually assigned to a requisition or a release / receipt document in order to identify the transaction throughout the logistics system and for the life of the transaction unto; its retirement is authorized in official audit reports. For turn-in actions to a disposal activity, the first six positions must be a valid Department of Defense Activity Address Code (DoDAAC) from the Department of Defense Activity Address File (DoDAAF). Transactions containing an invalid DoDAAC will be rejected by the disposal activity. If your agency has deemed the document number is mandatory, then the Agency Coordinator must update the agency settings. For Custodian Transfers; the number is not mandatory no matter what the Agency settings; however, if the user is required or wants to generate a DD FORM 1150, then a document number is required. The document number is mandatory for UIC and SITE ID Transfers.

## Document Number Process

### Definitions:

#### **DOC NBR:**

Unique numbers either automatically or manually assigned to track a requisition through the system from receipt to closing and to post custodial actions.

#### **DOC NBR REQD (Required):**

A value field with the options of Yes or No. Setting this field to 'Yes' causes Document Numbers to be a mandatory field in DPAS. Setting this field to 'No' results in Document Numbers being an optional field in DPAS. This field may only be updated by an Agency Coordinator.

#### **Document Number Type:**

A code used to identify the type of document.

#### **Document Range:**

A screen field used to limit the serial numbers of documents retrieved for reporting purposes.

#### **Document Type:**

The process for which the Document Number is being used. The only exception is for custodian transfer, where an Update Document Type is used.

### Document Number Business Rules:

The document number validation process is called upon by all processes where a DOC NBR is used.

It verifies that the document number entered by a user is the appropriate document type for the current process.

It also inserts any new DOC NBRs to the table so that it can be used again.

Users also have the capability to manually enter a value to the Document Number field. There must be at least one range of numbers in the document range for each UIC in order to use document numbers.

When the document number is mandatory, it must be in the following format: Department of Defense Activity Address Code (DoDAAC) + Julian Date + Serial Number, e.g. N6019192010009.

When the document number is optional, the format is not validated.

The Document Number browse function is not used, but the number may be entered directly in the DOC NBR field by the user.

For Turn-In actions to a disposal activity, the first six positions must be a valid Department of Defense Activity Address Code (DoDAAC) from the Department of Defense Activity Address File (DoDAAF).

Transactions containing an invalid DoDAAC will be rejected by the disposal activity.

If your Agency has deemed the Document Number is mandatory, then the Agency Coordinator must update any Agency settings.

For UIC and SITE ID Transfers; the DOC NBR is mandatory.

For Custodian Transfers, the DOC NBR is not mandatory regardless of the Agency settings; however, if the user is required or wishes to generate a DD FORM 1150, then a DOC NBR is required.

# Disposal (DSPL) Document Number (DOCUMENT NBR)

A unique reference number either automatically or manually assigned to a requisition or a release / receipt document in order to identify the transaction throughout the logistics system and for the life of the transaction unto; its retirement is authorized in official audit reports. For turn-in actions to a disposal activity, the first six positions must be a valid Department of Defense Activity Address Code (DoDAAC) from the Department of Defense Activity Address File (DoDAAF). Transactions containing an invalid DoDAAC will be rejected by the disposal activity. If your agency has deemed the document number is mandatory, then the Agency Coordinator must update the agency settings. For Custodian Transfers; the number is not mandatory no matter what the Agency settings; however, if the user is required or wants to generate a DD FORM 1150, then a document number is required.

The document number is mandatory for UIC and SITE ID Transfers.

### Equipment Control Code

Identifies equipment by secondary categories.

The second letter, the Equipment Control Code, identifies a specific type of equipment within the primary category (for example, AF = Aircraft, Fixed wing; AR= Aircraft; Rotary wing, GA = self propelled Howitzers; and HB = Truck ¼ ton).

## Equipment Utilization Form

The generation of a Maintenance and Utilization (M&U) form is similar to generation of any M&U report.

After navigating from the Forms-Report menu, select Schedule Reports.

When the Equipment Utilization Report Id is selected, enter the appropriate initial information and select the appropriate Form Option:

- Form Only
- Form with Inspection List
- Inspection List Only
- Blank Form

If Form Only or Form with Inspection List is selected, additional fields will appear.

Of those fields, only Dispatch Cd is mandatory.

Once you select the Search button on the Submit / Schedule page, the records that match the criteria will display in the lower table.

If more than 10 records exists, use the numbers in the bottom left corner of the lower table to change pages.

If you select more than one asset, up to 100, the form will generate a single PDF file for printing.

When the assets are selected, choose the Submit button to process the transactions.

Once processing is complete, the form is viewed just like any report.

**For ERRC Designator:**

<b>First Position:</b>	N = Nonexpendable
	X = Expendable
<b>Second Position:</b>	Identifies recoverable items through repairs and the lowest maintenance / repair level to condemning an item.
<b>Third Position:</b>	Except for category 1 (SCARS) the third position is meaningful only when used with the first two positions.

\* **Expendable** is a special AF term dealing with materiel accountability.  
 \*\* **Condemnation Level** represents the lowest maintenance level at which condemnation is normally accomplished.

## Estimated Cost

Calculated field to estimate Non-Reimbursable cost predicted from projected dispatch days.

EST. Cost = EST. Total Dispatch Hours x Driver Base Rate + (Daily Base Rate + EQUIP. Add On Rate + MISC RATE) x (Day Multiplier)

The Daily Rate, EQUIP. Add on Rate and the MISC RATE are to be prorated over the first 8 hours in a 24 hour period.

With this in mind, the Day Multiplier is calculated as follows:

1. Calculate the total estimated dispatch length in days:  
EST. Total Dispatch Days = [EST. Return Date & Time] - [EST. Issue Date & Time]
2. Determine the number of complete days (the whole number portion of calculated length).  
If the partial day portion (decimal) of the length is greater than .3333, then the Part Day Proration equals 1.  
Otherwise the Per Day Proration is calculated as follows:
  - A. Part Day Proration = (Part Day Decimal x 24) / 8
  - B. The Day Multiplier = Full Days + Part Day Proration

**Ex. 1:** if the Dispatch is 2.5 days, the Day Multiplier = 2 + 1 = 3

**Ex. 2:** if the Dispatch is 2.25 days, the Day Multiplier = 2 + .75 = 2.75

Estimated Total Dispatch Hours is calculated as follows:

1. EST. Total Dispatch Hours = [EST. Return Date & Time] - [EST. Issue Date & Time]
2. "Daily Base Rate and Equipment" and "Add On Base Rate" are daily rates that are prorated based hours used in the partial day portion of the dispatch.

### Extensible Markup Language (XML)

Extensible Markup Language is a general-purpose markup language providing a way to combine text and extra information about it.

The extra information, including structure, layout or other information, is expressed using markup, which is typically intermingled with the primary text.

The best-known markup language in modern use is HyperText Markup Language (HTML), one of the foundations of the World Wide Web.

Originally markup was used in the publishing industry in the communication of printed work between authors, editors and printers.

It can also be used to practice target observation and adjustment of fire, to practice machinegun traversing and searching, to develop speed during operation, and to obtain an accurate burst. This range can be used to train with the weapons on the ground or mounted on a vehicle. LN consists of area and firing points for one gunner to complete training objectives.</p>
<b>1763</b> —	Light Anti armor Weapon Range	<p>A range to teach soldiers the skills needed to defeat armored vehicles with recoil-less rifles or light antitank weapons using launch effects trainers, sub-caliber rockets, or small arms cartridges.</p>
<b>1764</b> —	Heavy Anti armor Weapon Range	<p>A range to teach the techniques of engaging targets with medium and heavy anti-armor weapons (missiles). It is also used for field tracking and qualification exercises with tracking and launch effect trainers. LN consists of range area to accommodate up to 10 gunners.</p>
<b>1765</b> —	Artillery Direct Fire Range	<p>A range to fire cannon artillery and other large caliber guns using high-explosive ammunition. Direct fire means the crew can see the target and fires as a point-to-point weapon. EA is defined as range to support up to one battery of artillery.</p>
<b>1766</b> —	Tank Stationary Gunnery Range	<p>A range to train tank and fighting vehicle crews in the rapid engagement and destruction of targets during day and night exercises from a stationary vehicle. EA is defined as range to support up to 15 gunners.</p>

<b>1768</b> —	Scaled Indirect Fire Range	A scaled range to teach firing skills to the entire indirect fire team. EA is defined as range to support up to a section/battery.
<b>1769</b> —	Scaled Gunnery Range	A range to zero fighting vehicle and tank weapons. The range is also used to train crews to manipulate turret and gun controls, fire the main gun while tracking a moving target, interact with other crew members, react to fire commands, identify targets, and to bring the main gun quickly on target. EA is defined as range to support up to 4 vehicles.
<b>1771</b> —	Armor Vehicle Crew Training Range	Ranges specifically designed to satisfy training requirements for infantry and armor crews and teams to include gunnery from moving vehicles. These ranges are used to teach mechanized infantry and armor crews the skills needed to defeat stationary and moving targets in a tactical array. LN is defined as range to support 2 vehicles.
<b>1772</b> —	Armor Vehicle Unit Training Range	Range complexes consist of ranges to accommodate tank and fighting vehicle firing exercises and tactical maneuver training for tanks, mechanized infantry small units. These ranges are used to teach mechanized infantry and armor units the skills needed to defeat stationary and moving targets in a tactical array. EA is defined as range to support up to 6 vehicles.
<b>1773</b> —	Fire and Movement Range	A range used to teach individual and buddy-team

### Facility/Facilities

Identifies the facility or facilities involved in the physical inventory.

A facility is the name given to a real property facility. Facilities are primarily intended to be physical Real Property with the capability to associate it to a Real Property Unique Identifier (RPUID), allowing for the identification of the Installation, Site, etc. where the facility is located. While it is intended to be real property, Defense Property Accountability System (DPAS) will provide the capability for a Facility to be Non-Real Property, such as a Trailer or Military Van Container (MILVAN), which might be used to forward supply a Unit rather than the Unit coming to a physical location to obtain the required supplies and materiel. Inside the trailer, you could then identify Locations / Containers as they would with real property.

For the drop-down field, the options are specific to the warehouse associated with the accessed user ID.

# Federal Automotive Statistical Tool (FAST) Location Withheld

Identifies if the FAST asset is secretive enough that the whereabouts cannot be known. The option can be set to Yes (meaning it cannot be known where it is) or No (meaning it can be known where it is).

Vehicles designated as location withheld should carry one or more attributes corresponding to vehicles for which withholding location typically makes sense:

- Designation as a law enforcement vehicle (S-6)
- Designation as an emergency response vehicle (S-7)
- Designation as an armored vehicle (S-8)

# Federal Logistics (FEDLOG) Processes

## Importing FEDLOG National Stock Numbers (NSN) into DPAS

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	

The DPAS interface with the Defense Logistics Information Service (DLIS) provides a means for DPAS to interface with the National Stock Numbers (NSN) in the Federal Logistics Record (FEDLOG).

The FEDLOG is the official source of supply management Stock Number(s) for items authorized for all services.

Tailored FEDLOG files have been created by DLIS to meet DPAS requirements, called the FEDLOG MSTR (Master) and Catalog FEDLOG SVC (Service) files.

The DPAS Data Processing Center is responsible for loading the tailored FEDLOG file to DPAS. NAVSISA (Navy Supply Information Systems Activity) receives add / update / delete files and is responsible for loading the tailored FEDLOG file to DPAS.

The user can access the FEDLOG data utilizing the following programs: Catalog Add / Update / Delete, and the FEDLOG Inquiry (to be in a future release).

DLIS creates an updated file monthly of adds / updates / deletes and send the file using FTP (File Transfer Protocol).

The DPAS system administrator updates the Base Catalog for each catalog name and creates a report with updates / deletes.

Every month, DLIS creates and uses an FTP process to update the FEDLOG file with adds / updates / deletes to NSN(s).

In September (currently around the 22nd day of the month), DLIS creates an annual, complete file to perform an annual reconciliation of the DPAS Catalog to the FEDLOG and generate a change report.

The DPAS System Administrator loads the new file to the DPAS FEDLOG interface system-level tables and notifies the DPAS CDA (Central Design Authority) staff when the file has transmitted successfully.

DLIS sends an email to the DPAS CDA and the FEDLOG functional analyst to let them know the FEDLOG files are ready to process.

Once the DPAS CDA receives the files, the System Administrator for DPAS is notified in order to retrieve the files, place them on the production platform and schedule the FEDLOG Upload process.

This interface updates the DPAS Base Catalog, Catalog FEDLOG MSTR and Catalog FEDLOG SVC records.

The FEDLOG Change report is generated as a result.

Deleted files are renamed and archived to the Catalog Base History Table.

For records to be deleted, the process updates the Catalog Base and the Catalog FEDLOG MSTR with a NIIN STS CD (National Item Identifier Status Code) of '8'.

DPAS receives only NIINs in the delete file.

Due to the number of records for the annual FEDLOG upload, the DLIS DPAS reconciliation file may need to be paused and restarted the following evening.

If the Accounting data will be displayed in the following order: change / delete reconciliation is running in the morning, it can be paused and restarted in the afternoon or evening where it was paused previously.

This only works for the files that are to be loaded (If paused, imports restart at the beginning).

For each STOCK NBR, there is one 'Type 01' (master record) record and at least one 'Type 02' (service specific) record.

There may be many 'Type 02' records for each 'Type 01' record.

There may be many STOCK NBR(s) using service records for each master record.

The 'Type 02' record is the service record from FEDLOG which designates service specific changes for the '01' record.

#### Valid Demilitarization Codes and Controlled Inventory Item Codes combination

DMIL Cds (Demilitarization Codes) Are:

P

A, B, Q

C, D, E, F

G

CIIC(s) (Controlled Item Inventory Codes) Are:

A, B, C, D, E, F, G, H, K, L, S, or T, 5, 6, 8 (Numerics = Small Arms, not AEDA)

1, 2, 3, 4, 9, J, I, M, N, O, P, Q, R, U, V, W, X, Y, Z

1, 2, 3, 4, 7, 9, J, I, M, N, O, P, Q, R, V, W, X, Y, Z, \$

1, 2, 3, 4, 5, 6, 7, 8, 9, A, B, C, D, E, F, G, H, J, K, L, M, N, O, P, Q, R, S, T, V, W, X, Y, Z (5, 6, 8 = AEDA, not small arms)

### Annex B

#### FEDLOG Interface Report (Sample)

The FEDLOG Interface Change Report shows any changes occurring from the interface process. With an Excel spreadsheet format, it displays only changes (Part 1) and deletes (Part 2) to Stock Number(s) and associated fields in the FEDLOG file tailored to DPAS.

This report is in the standard report format.

It shows only the Stock Number along with the fields that have changed.

FEDLOG Interface Change Report

#### FEDLOG Change Load

The FEDLOG Change Load (batch) change program for the FEDLOG process updates the temporary tables and can run separately.

#### FEDLOG Recon Load

The FEDLOG Recon Load (batch) only runs once a year.

This table gets loaded from the FEDLOG import file.

When finished, the Catalog FEDLOG MSTR file replaces the Catalog FEDLOG MSTR file and the Catalog FEDLOG SVC temp file replaces the FEDLOG SVC file.

## **FEDLOG Recon Import**

The FEDLOG Recon Import batch is the reconciliation import batch for the FEDLOG process. The Catalog FEDLOG Import Base Catalog file is loaded only when there is something on the DPAS Base Catalog, retrieving all records from the DLIS DPAS Reconciliation file.

## **Annex C**

### **FEDLOG Interface Report**

The purpose of this report is to show any deletes or changes that occurred from the process of the FEDLOG applications including, but not limited to, STOCK NBR, ITEM DESC, CIIC, Unit Price, etc.

One report is created for each catalog name.

### Federal Standard Item

The identifier(s) used to categorize Federal Vehicle Standards within the General Services Administration.

# Federal Standard Requisitioning and Issue Procedures (FEDSTRIP)

The Federal Standard Requisitioning and Issue Procedures govern the interchange of information for all materiel commodities between civilian agencies and government activities. Federal agencies authorized to requisition from Military sources should conform to the provisions of the Military Standard Requisitioning and Issue Procedures (MILSTRIP) Guide.

1	a	Programs which have been approved for top priority by the President as set forth in the BRICK-BAT Category of the latest DOD Master Urgency List (MUL). The automatic FAD ranking will continue as long as that program remains in the BRICK-BAT Category of the DOD MUL. When a program drops from the BRICK - BAT Category, the use of FAD I may continue for 90 days. This allows for uninterrupted processing of these requests that fall under (b) below. Continued use of the FAD I does not permit continued use of the BRICK-BAT Category (or the counterpart DX industrial priority rating). Ended use in that category is effective immediately.
	b	Units, projects, or forces, including foreign country forces, which

## Freight Description

The National Motor Freight Classification (NMFC) is a standard that provides a comparison of commodities moving in interstate, intrastate and foreign commerce. It is similar in concept to the groupings or grading systems that serve many other industries. Commodities are grouped into one of 18 classes—from a low of class 50 to a high of class 500—based on an evaluation of four transportation characteristics: density, handling, stowability and liability. Together, these characteristics establish a commodity’s “transportability.” By analyzing commodities on the basis of the four transportation characteristics and ONLY on the basis of those characteristics, the NMFC® provides both carriers and shippers with a standard by which to begin negotiations and greatly simplifies the comparative evaluation of the many thousands of products moving in today’s competitive marketplace.

State	Status	Definition
<b>Open —</b>	Shipped	— Asset was shipped and is currently enroute to gaining activity.
	Pending Loss	— Asset was reported as not received or damaged during shipment; Pending investigation.
	Past Due Receipt	— A Receipt from the gaining activity has not been received within the expected time frame; Pending follow-up.
	Receipt - Pending Shipment	— In-Transit record was created by a Receipt - Shipment required to close out the in-transit

## Help Reference Guide

<b>Closed —</b>	Receipt Acknowledged	— Asset was shipped with a positive confirmation of receipt by the gaining activity.
	Weapon Lost	— Asset was reported as lost or damaged after investigation.
	Shipment Reversed	— Shipment has been cancelled and returned to losing activity.
	Receipt - No Shipment	— In-Transit record was created by a Receipt - Shipment required to close out the in-transit was never received
	Delinquent Shipment	— An invalid in-transit record that was created by a delinquent shipment - Manually closed-out
	Delinquent Receipt	— An invalid in-transit record that was created by a delinquent receipt - Manually closed-out

## Invalid Formatted Unique Item Identifier (UII)

An asset identifier (bar code) is an example of a UII.  
If the UII is not formatted correctly, it is not possible to use.

<b>OBN</b> —	Overage Bulk No match - a bulk asset was scanned that was not in the inventory.
<b>OFA</b> —	Overage Found Asset - the description of the asset was entered on the scanner, but there was no asset Id.
<b>OND</b> —	Overage Not on Defense Property Accountability System (serial or bulk) - an asset was scanned that was not in the inventory.
<b>OPD</b> —	Overage Previous Defense Property Accountability System Asset (serial) - an asset was removed, but during the inventory that asset Id was scanned.
<b>OPM</b> —	Overage Possible Match - the serial number may match an asset.
<b>OPP</b> —	Overage Possible Previous Match - the serial number of an asset that has been removed.
<b>OUI</b> —	Overage Uninitialized (serial) - an asset id of an item was scanned but not initialized with the inventory. It belongs to another UIC or Custodian.

<b>RCC</b> —	Reconciled Condition Code Change - an asset reconciled with a condition code change.
<b>RLC</b> —	Reconciled Condition Code and Location Change - an asset processed with a location and condition code change.
<b>RLO</b> —	Reconciled Location Change - an asset reconciled with a location change.
<b>RNC</b> —	Reconciled No Changes - an asset reconciled with no changes to the record.
<b>SBN</b> —	Shortage Bulk No Match - a bulk asset that was a shortage with no matching record.
<b>SLO</b> —	Shortage Location (serial) - entering a location that does not exist and scanning an asset using that location.

# Inventory Management Plan

Each activity formulates an Inventory Management Plan based on local needs in accordance with Department of Defense Instruction 5000.64, Accountability and Management of DoD-Owned Equipment and Other Accountable Property.

The plan should cover such items as how often inventories will be taken, who will conduct the inventory, and the detail scope of the inventory.

The Inventory Management Plan is created by the Agency Coordinator. DPAS stores inventory management plans at three levels:

- Agency – Highest level. Controls the ability to set parameters at all levels: Agency, ACTBL UIC, and UIC.
- ACTBL UIC – Level below Agency. Controls the ability to set parameters at the ACTBL UIC and UIC levels. This is an administrative level only. Assets do not exist at this level.
- UIC – Lowest level, below ACTBL UIC. Physical assets and their associated information reside at this level.

There are two types of Inventory Management Plans:

- General – Non-sensitive Plant, Property and Equipment (PP&E) assets.
- Sensitive – Assets that require special control and accountability.

### Inventory Type

Identifies the kind of inventory of the Inventory List Number.

The Deferred to a Lower Level Inventory Type means if the Agency does not set the specific parameters of the Inventory Management Plan, the Agency Coordinator allows these decisions to be made at a lower level. In the INV TYPE field, *Defer to a Lower Level* is selected. Selecting this option allows the different Accountable UICs within the agency to determine how inventories will be completed for their activities. The Accountable Property Office (APO) and/or Property Administrator (PA) have the choice to have all UICs use the same plan, or as with the Agency Coordinator, defer this decision to the UIC level. The UIC is the lowest level to which the plan can be deferred.

# Invoice, Receipt, Acceptance, and Property Transfer (IRAPT)

A secure Web-based system for electronic invoicing, receipt and acceptance.

WAWF was merged with IRAPT.

WAWF is a part of the PIEE umbrella.

IRAPT creates a virtual folder to combine the three documents required to pay a Vendor — the Contract, the Invoice, and the Receiving Report.

IRAPT customers include:

- Air Force (USAF)
- Army (USA)
- Defense Finance and Accounting Service (DFAS)
- Defense Information Systems Agency (DISA)
- Defense Contract Audit Agency (DCAA)
- Defense Contract Management Agency (DCMA)
- Defense Logistics Agency (DLA)

### License Allocation (in dollars)

A Bar Graph that compares the software licenses associated with the asset to the software license quantity assigned to the IT devices.

If there are more licenses for that particular software than there is installed on assets, then it is over allocated (over).

If the software is installed on more assets than there are licenses for that software, then it is under allocated (under).

If the counts per software are equal, then it is fully allocated (full).

Clicking on one of the graph sections (Under, Over, or Full) displays the license details grid. The grid has the clicked category displayed.

### Manual Document Number (Doc NBR)

A unique reference number manually (started and created by the user, as opposed to automatically created by DPAS) assigned to a requisition or a release / receipt document in order to identify the transaction throughout the logistics system and for the life of the transaction unto; its retirement is authorized in official audit reports.

For turn-in actions to a disposal activity, the first six positions must be a valid Department of Defense Activity Address Code (DoDAAC) from the Department of Defense Activity Address File (DoDAAF). Transactions containing an invalid DoDAAC will be rejected by the disposal activity. If your agency has deemed the document number is mandatory, then the Agency Coordinator must update the agency settings.

For Custodian Transfers; the number is not mandatory no matter what the Agency settings; however, if the user is required or wants to generate a DD FORM 1150, then a document number is required.

The document number is mandatory for UIC and SITE ID Transfers.

# National Item Identification Number (NIIN)

A 9-digit numeric code which uniquely identifies an item of supply in the NATO Codification System (NCS).

It is the second part of the National Stock Number (NSN).

The number consists of a two position numeric National Codification Bureau (NCB) country code, and a seven-position number serially assigned to each supply item having an approved Federal Item Identification.

It is often prefixed by the Federal Supply Class (FSC) to form a National Stock Number (NSN). However, the NIIN alone uniquely identifies the item, the FSC merely adds context by indicating the general classification of the item.

The seven characters are a non significant identification number (actually code, as some of these characters may be alphanumeric, although in general NIINs are strictly numeric.)

The 5th and 6th character pair is used to record which country was the first to codify the item — which one first recognized it as an important item of supply. This is generally the country of origin, meaning the country of final manufacture.

The NIIN may be formatted with dashes: 01-234-5678

This format improves readability but is optional as NIINs are often listed without dashes.

# National Motor Freight Classification Code

The National Motor Freight Classification <sup>™</sup> (NMFC<sup>™</sup>) is a standard that provides a comparison of commodities moving in interstate, intrastate and foreign commerce.

It is similar in concept to the groupings or grading systems that serve many other industries. Commodities are grouped into one of 18 classes — from a low of class 50 to a high of class 500 — based on an evaluation of four transportation characteristics: density, stowability, handling and liability.

Together, these characteristics establish a commodity's "transportability."

## Object Class

Object classes are categories in a classification system that present obligations by the items or services purchased by the Federal Government.

OMD divides the major classes into smaller classes and presents them in object class schedules. The classes present obligations according to their initial purpose, not the end product or service. For example, if you pay a Federal employee who constructs a building, classify the obligations for the employee's wages under Personnel compensation and benefits, rather than Acquisition of assets.

If you purchase a building, classify the contractual obligations under Acquisition of assets.

### Operational Test Code

Operational Test Codes (OTCs) are assigned and used within the Marine Corps Logistics Bases (Albany and Barstow) to identify items of supply on which special procedures must be performed while under Care-In- Stores or as a part of the issue process.

Special procedures are in addition to normal care-in-stores, shelf life and Electrostatic Discharge (ESD) handling procedures.

Codes are used to assure the quality of the item is maintained and to ensure the item will perform its intended function(s) upon issue from Condition Code A stocks.

### Paragraph Number

Identifies a specific organization within a specific Unit Identification Code (UIC). The first three positions are numeric and the fourth position, if entered, must be alpha. When entered, the first three positions are mandatory, and the fourth is optional. If you are using the Authorization Module and are tracking the Authorizations down to the Custodian level, you must enter a Paragraph Number. This Paragraph Number must be unique, it cannot be on any other Custodian. If you are building a Sub Custodian you must leave the Paragraph Number blank. The Sub Custodian uses the Paragraph Number of the Major Custodian to which it is attached.

# Parent Unit Identification Code (UIC) Custodian UIC

UICs are used by the military service to identify an organizational entity similar to a Cost Center.

Using the concept of UIC / Parent UIC, the organizational tree becomes infinite with the top of the tree being the UIC without a Parent UIC.

UICs are used to identify the organization that materiel is issued to with the expected return of the materiel once the deployment purpose of the Unit has been satisfied.

The Unit Custodian is appointed by the Commanding Officer with the authority to accept, issue, and manage materiel transfers for custody to the unit.

The assignment is provided to a primary and alternate within the unit.

The UIC Custodian at the unit level is known as the unit Responsible Officer (RO).

A UIC is not required to have a Custodian associated with it.

Prior to the unit having a "Unit Issue", the UIC must have a primary custodian for the commodity type of the unit issue established.

The primary custodian cannot not be removed until all account of outstanding gear has been cleared.

# Passive Radio Frequency Identification (RFID)

A data collection technology that uses electronic tags for storing data.

The tag is made up of a Radio Frequency Identification chip attached to an antenna.

Tags may be battery-powered or derive their power from the radio frequency waves coming from the reader.

Like bar codes, RFID tags identify items.

However, unlike bar codes, which must be in close proximity and line of sight to the scanner for reading, RFID tags do not require line of sight and can be embedded within packages.

Depending on the type of tag and application, they can be read at a varying range of distances.

Passive RFID tags only broadcast after a signal from the reader requesting a read versus active which broadcasts as long as the tag has power.

### Price Earnings (PE)

The price to earnings ratio (PE Ratio) is the measure of the share price relative to the annual net income earned by the firm per share.

PE ratio shows current investor demand for a company share.

A high PE ratio generally indicates increased demand because investors anticipate earnings growth in the future.

The PE ratio has units of years, which can be interpreted as the number of years of earnings to pay back purchase price.

## Product Service Code

A four-digit code that describes a product, service, or research and development (R&D) activity purchased by the federal government. The Product and Service Codes Manual maintained by the General Services Administration (GSA) lists all the existing product/service codes. Specific to the Internal Use Software (IUS) and becomes available when the Type Asset Code = S - Software. This is limited to the 7000 series.

# Radio Frequency Identification (RFID)

A data collection technology that uses electronic tags for storing data.

The tag is made up of a Radio Frequency Identification chip attached to an antenna.

Tags may be battery-powered or derive their power from the radio frequency waves coming from the reader.

Like bar codes, Radio Frequency Identification tags identify items.

However, unlike bar codes, which must be in close proximity and line of sight to the scanner for reading, Radio Frequency Identification tags do not require line of sight and can be embedded within packages.

Depending on the type of tag and application, they can be read at a varying range of distances.

<b>NAR —</b>	Not Assessed Routinely	An asset that is not routinely planned to be evaluated for National Register of Historic Places (NRHP) eligibility. While not routinely assessed, these individual assets should be evaluated pursuant to 54 USC §306108 and 36 CFR Part 800 if there is a potential to affect historic properties. For purposes of physical inventory, assets assigned the Historic Status Code value NAR are not considered historic. The appropriate assignment of the RPA Historic Status Code value NAR is determined at the national level and Facility Analysis Category codes (FACCODES) appropriate for NAR value assignment are provided in Appendix XX. If an asset has been previously assigned a Historic Status Code value other than NEV, the value remains unchanged and NAR should not be assigned. The value NAR should only be assigned to assets previously having a value of NEV.
<b>NCE —</b>	Non-Contributing Element of NHL/NRL/NRE District	Assets within the designated boundaries of a National Historic Landmark (NHL) or National Register of Historic Places (NRHP) listed or eligible property that have been evaluated and determined not to contribute to the historic significance of the property. This determination is carried out by the installation staff in consultation with the State Historic Preservation Officer (SHPO) or Tribal Historic Preservation Officer (THPO), and the Keeper of the

# Report Department of Defense Activity Address Code (DoDAAC)

The DoDAAC of the site reporting the asset for redistribution.

A DoDAAC is a distinctive code assigned to identify specific units, activities and organizations, NON-DoD and contract activities engaged in the requisitioning, receiving, and billing of materiel. Code can be any number or letter, except the letters I and O.

Sending DoDAAC in the Supply Export process is the DoDAAC for the Accountable Unit Identification Code (UIC) of the site that is sending data from DPAS to SARSS.

Receiving DoDAAC in the Supply Export process is the DoDAAC for the SSA that is responsible for processing SARSS for the DPAS site submitting the data.

Receiving DoDAAC in the increase/decrease processes is the DoDAAC of the UIC gaining an asset.

Holding DoDAAC in the Excess Actions Add/Change and Excess Non Property Add/Change is the DoDAAC where the asset is being held when the asset is marked as excess.

# Revaluation

One of the reasons for updating an asset's Acquisition Cost.

## Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	

In private industry, a company may revalue assets to take account of inflation or changes in value since the assets were acquired. Another way to say it is that the revaluation represents a reassessment of the value of a capital asset as at a particular date.

An asset is originally recorded in the accounts at its cost and depreciated periodically over its estimated useful life as a measure of the amount of the asset's value consumed in that period. In practice, the actual useful life of an asset can be miscalculated or an event can cause a change to the useful life. Consequently, assets occasionally need to be revalued in order to reflect a more close approximation to their "worth" in the accounts.

When the asset is revalued, the offsetting entry (in a double entry accounting system) would be either made to the profit or loss accounts or to the equity of the entity.

For Government purposes, revaluation should rarely be used, and only in conjunction with your Accounting POC. One reason revaluation should NOT be used is for a price correction. Auditing rules are different for revaluations than for price corrections.

Revaluation Allowance represents the difference between standard inventory values and either historical cost or net realizable value.

## Examples:

- In everyday life, a homeowner is assessed property taxes based on the value of the home. Homes are "revalued" by the county or other local authority and taxes increased (or decreased) appropriately according to that revaluation. The assessed value of the house stays the same until the next valuation.
- A revaluation can occur for assets purchased with foreign currency, which is then converted to U. S. Dollars. If the exchange rate changes, a revaluation may be required.

# Reversal Type

Confirms placing an asset that was disposed back on the books.

<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	Alpha-Numeric (A/N)

## Radio Frequency Identification (RFID) Tag

The tag identifier used for data collection technology to track assets.

RFID uses electronic tags for storing data.

The tag is made up of a Radio Frequency Identification chip attached to an antenna.

Tags may be battery-powered or derive their power from the radio frequency waves coming from the reader.

Like bar codes, Radio Frequency Identification tags identify items.

However, unlike bar codes, which must be in close proximity and line of sight to the scanner for reading, Radio Frequency Identification tags do not require line of sight and can be embedded within packages.

Depending on the type of tag and application, they can be read at a varying range of distances.

## Secure File Transfer Protocol (SFTP) Outbound Process

The Secure File Transfer Protocol (SFTP) Outbound Process sends files created by the Defense Property Accountability System (DPAS) to the appropriate interfaced site. This process is executed whenever a file has been created by DPAS for a site with which DPAS has an interface agreement. Ordinarily, an SFTP Outbound Process is on an automated daily schedule.

Each external system with which DPAS interfaces has an Outbound Interface file in the appropriate format placed in the appropriate sub-directory to interface with DPAS.

The DPAS Administrator Console (DAC) External System Site records the presence of a file in the appropriate sub-directory is used to determine the External System 'Key', which in turn identifies which interface is being processed.

### Fields

- File Transfer Protocol (FTP) Site Address
- FTP User Identification
- FTP Password

### Process

- For processes scheduled automatically, DPAS checks to see if a file exists
  - When no file exists, DPAS ends the FTP process.
  - When a file exists, DPAS continues the FTP process.
- Using the FTP Site Address
  - Log in to the address using the User Id and Password
  - Move the Outbound Interface File to the address
  - When FTP is unsuccessful, DPAS ends the FTP process.
  - When FTP is successful, DPAS continues the FTP process.
- Move the Outbound Interface File to the appropriate backup sub-directory

## **Current External Interfaces (Outbound Interface Files)**

- Standard Accounting and Reporting System (STARS) Outbound File
- Electronic Business (E-BIZ) Outbound File
- Standard Accounting, Budgeting and Reporting System (SABRS) Outbound File [Marine Corps]
- First Article Management Information System (FAMIS) Outbound File
- Unique Item Tracking (UIT) Outbound File
- Item Unique Identification (IUID) Outbound File
- Defense Re-utilization Management System (DRMS) Automated Information System (DAISY) Outbound File
- Wide Area Work Flow (WAWF) Outbound Extensible Markup Language (XML) File

## Standard Financial Information Structure Code — Type Asset / ACC / SFIS Association

A code indicating which of the Standard Financial Information Structure layouts is being used for the importation of data.

These include XML instances (.xml) and XML schemas (.xsd).

The XML instances contain the data values and structures which are to be imported into DPAS.

The XML schemas provide the metadata to assist the technical staff in developing the import process; the schemas describe the layout of the XML instances.

# Stock Number

Number assigned to each asset that is unique to a specific catalog within each logistics program. The Stock Number process is at the Catalog level, whereas the Stock Item process is at the Warehouse level.

When a Stock Number is created, it is then configured for each Warehouse’s specific stocking parameters. This is part of the Stock Item process.

Requisition – A unique NSN or Manufacturer Part Number that is used to identify the requested Requisition materiel.

# Substitute Stock Number

The replacement number assigned to each like asset of supply purchased, stocked or distributed within the Federal government.

For turn-in of assets, if valid Stock Number not available, use Federal Supply Class and description.

Proper assignment of a stock number is critical for proper identification and inventory of the item.

The Stock Number and associated Item Description appear in numerous reports throughout DPAS.

The type of stock number created is identified in the Stock Item Code field.

<b>Field Structure:</b>	
<b>Field Length:</b>	6
<b>Data Type:</b>	Alpha-Numeric (A/N)

### Transportation Control Number (TCN)

Number assigned by DLA transportation services, to track shipping.

The first six places are made up of the DoDAAC.

The next four places are the Julian date (The first number represents the last number of the year. So January 1, 2011 will be 1001 thru 1365).

The next four numbers are for the order in which a request to ship something is received by Air Mobility Command Headquarters starting at 0000 thru 9999 on any given date.

The last three letters usually XXX are just place holders used for other reasons (including a multi shipment of more than one item that are all identical, i.e. 20 desks & chair sets; or if they have over 9,999 requests placed then can make the first X an A for 0001AXX).

#### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	1 – 6 = DoDAAC 7 – 10 = Julian Date 11 – 14 = Order of Request 15 – 17 = Place Holders

### Uniform Freight Classification Code

The Uniform Freight Classification is a standard that provides a comparison of commodities moving via rail.

It is similar in concept to the groupings or grading systems that serve many other industries. Commodities are grouped into one of 18 classes—from a low of class 50 to a high of class 500—based on an evaluation of four transportation characteristics: density, stowability, handling and liability.

Together, these characteristics establish a commodity's "transportability."

## Unique Item Identifier (UII)

A UII (UII Data Set) is a permanent 2-dimensional data matrix.

The data matrix is encoded with the data elements necessary to construct a UII which is globally unique.

A commercial UII follows construct standards which are constructed according to approved DoD methods.

A **virtual UII** enables the data base entry of a UII and its associated pedigree data, while postponing the physical marking of the item with a two-dimensional data matrix symbol to a more advantageous time based on logistic and economic considerations.

- An item shall have an existing innate serialized identity and qualify for item unique identification (IUID).  
Contractors in possession of Government property may use the property control number or asset identification number they use to track the item as the innate serialized identity.
- The innate serialized identity data (e.g., enterprise designation; part, lot or batch number; serial number; or property control number) must be affixed to the item (e.g., contact memory button, linear bar code, human readable data plate, etc).
- Items that require unique identification and are too small to have their innate serialized identity data physically placed on them may have this data placed on a tag attached to the item.  
The tag must remain attached to the item to assure unique identification is maintained. Once the tag is removed, unique identification is lost.

The UII is never changed and the mark is permanent through the life of the product.

An asset identifier (bar code) is an example of a UII.

For items that are serialized within the enterprise identifier, the UII data set includes the data elements of enterprise identifier and a unique serial number.

For items that are serialized within the part, lot or batch number within the enterprise identifier, the UII data set includes the data elements of enterprise identifier, the original part, lot or batch number, and the serial number.

### Unique Item Identifier (UII) Required

Identifies if a UII is mandatory.

A UII (UII Data Set) is a set of data elements marked on an item that is globally unique and unambiguous.

The UII is never changed and the mark is permanent through the life of the product.

An asset identifier (bar code) is an example of a UII.

For items that are serialized within the enterprise identifier, the UII data set includes the data elements of enterprise identifier and a unique serial number.

For items that are serialized within the part, lot or batch number within the enterprise identifier, the UII data set includes the data elements of enterprise identifier, the original part, lot or batch number, and the serial number.

# Unique Item Tracking (UIT) Reporting

Unique Item Tracking (UIT) is the Department of Defense (DoD) program to maintain asset visibility of specific categories of equipment and Serial Numbers.

## Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	

## It includes

- Small Arms
- Cryptographic items
- Sensitive or Radioactive Testing Equipment
- Monitoring Equipment

## Sub-programs of UIT include the DoD

- Small Arms Serialization Program (DoDSASP)
- Controlled Cryptographic Item Serialization Program (CCISP)

Categories of data reported include DoDSASP, CCISP and CBS-X.

To ensure appropriate visibility, UIT requires transactional reporting to the UIT Central Registry from all elements in possession of reportable items.

The U.S. Army Materiel Command Logistics Support Activity (USAMC LOGSA) executes the UIT Central Registry mission for all UIT programs, as well as the DoDSASP Central Registry. In addition to transaction reporting, an annual reconciliation of the Serial Numbers for all Reportable items is required between the UIT Central Registry and each of the Reporting activities. Within the Defense Property Accountability System (DPAS), the term UIT refers to Serial Number reporting (to the UIT Central Registry).

Reporting only takes place if the Unit Identification Code (UIC) System Setting is set to Reportable.

(The Setting Category has a value of 'EX', and the Setting Type has a value of 'UIT').

## DPAS Table Records

- Accountable UIC
- UIC
- UIC System Settings
- UIT Interface
- Base Catalog
- Asset Master
- Process Queue

## Process Description

UIT Transaction reporting is accomplished automatically each day without user intervention or request.

Transactions that affect the Property Book balance for specific Reportable Codes are included in the UIT Transaction reporting process.

This process creates a UIT Transaction Report for the user and a data file for transmission to the LOGSA, Huntsville, AL.

As the data is received and processed at LOGSA, output reports are distributed by mail to DPAS users each month.

If the transaction is for a serially numbered item, all Serial Numbers for the Stock Number and UIC are included on the transaction.

One record may hold 1024 Serial Numbers associated with that Stock Number.

Bulk Reportable assets only provide a Total Quantity for the Stock Number by UIC.

Each process that can trigger a UIT event calls the UIT Reporting 'Common Function' and send the necessary data.

The UIT Reporting Common Function populates the fields on the UIT Interface Table Records.

## Conditions that should create a transaction

1. Changes to the **UIC Reportable Codes**.  
If the UIC Settings are changed on the UIC System Settings table records, and the UIC has reportable assets on the Asset Master table records, and the assets do not have a Loan Cd that has a value of either 'L' or 'N' (In On Loan), then the **UIT** generates a plus transaction or a minus transaction for each reportable asset.
2. Changes to the **Stock Number Reportable Code**.  
If the Reportable Cd on the Base Catalog table record is:

## Help Reference Guide

- A. Changed from '0' (Not Reportable) to 'A' (Reportable)
- B. The Asset Master has this Ctlg Base Ky (Catalog Base Key)
- C. The Loan Cd does not have a value of 'In on loan'
- D. The UICs are Reportable on the UIC System Settings records

then a plus **UIT** transaction is generated for each UIC containing all the Serial Numbers associated with that Stock Number.

If the Reportable Cd on the Base Catalog table record is changed from 'A' to '0', a minus **UIT** transaction is generated.

### 3. Changes to the **Stock Number**.

If the **Stock Number** changes

- A. From one **Stock Number** to another for a Reportable asset AND
- B. the **Loan Cd** is not 'L' or 'N' AND
- C. the **UIC(s)** is reportable

then a minus UIT transaction is generated for the 'From' Stock Number and a plus **UIT** transaction 'To' Stock Number.

Transactions should be generated for each Reportable UIC with assets.

### 4. Changes to the **Stock Item Code**.

If the

- A. **Stock Itm Cd** (Stock Item Code) on a Reportable Stock Number changes from 'B' to 'J',
- B. There are assets on the Asset Master table records,
- C. The **Loan Cd** is not 'L' or 'N',
- D. The **UIC(s)** is reportable,

then a minus **UIT** transaction is generated for each Reportable UIC.

If the Stock Item Cd changes from a 'J' to a 'B', a plus **UIT** transaction is generated for each Reportable UIC.

### 5. Addition of a **Reportable** asset.

When adding an asset with a

- A. Reportable Stock Number,
- B. Reportable UIC,
- C. **Loan Cd** that does not have a value of 'L' or 'N',
- D. **Stock Itm Code** = 'A' or 'B',

then a plus **UIT** transaction is generated.

### 6. Deletion of a **Reportable** asset.

## Help Reference Guide

When deleting an asset with a Reportable Stock Number, a Reportable UIC, Loan Cd that does not have a value of 'L' or 'N', and Stock Item Code that does not have a value of 'A' or 'B', a minus **UIT** transaction is generated.

7. Changes to a **Loan Cd**.

- A. If the Loan Cd changes from 'L' or 'N' to any other value,
- B. The UIC is reportable to **UIT**,
- C. The Stock Number is reportable to **UIT**,
- D. The Stock Itm Cd has a value of 'A' or 'B',

then a plus **UIT** transaction is generated.

If the Loan Cd changes from any other value to 'L' or 'N', and all other conditions are met, a minus **UIT** transaction is generated.

8. Changes to the **Serial Number** of a **Reportable** asset.

If the

- A. Serial Number of a Stock Number with a Reportable Cd that has a value of 'A' is changed,
- B. UIC is **UIT** reportable,
- C. Loan Cd does not have a value of either 'L' or 'N',
- D. Stock Itm Cd of the Stock Number has a value of either 'A' or 'B',

then both a minus and a plus **UIT** transaction are generated.

The transactions should include all **Serial Numbers** for that **Stock Number** and **UIC**.

## Other Considerations

1. Management Message generation. (To be incorporated into DPAS at a later date.)
2. Form Numbers are determined by the Type Action Code on the Asset Master record and the Program ID (Identification).  
Any program that does not have a Type Action Code defaults to the Form Number of DD 4949.

## Unit Identification Code (UIC)

The UIC is a code that uniquely identifies a unit, organization or activity.  
The first character is the Service designator.  
The 2nd through 4th characters are the Parent Organization designator.  
The 5th and 6th characters are the Descriptive designator.  
For real property, this is the UIC of the Funding organization.

### Unit Identification Code (UIC) Custodian

The Unit Custodian is appointed by the Commanding Officer with the authority to accept, issue, and manage materiel transfers for custody to the unit.

The assignment is provided to a primary and alternate within the unit.

The Unit Identification Code (UIC) is used to manage all unit roles, assignments, and data.

The UIC Custodian at the unit level is known as the unit Responsible Officer (RO).

DPAS will provide for Unit Custodians (primary and alternate) by commodity type.

# Unit of Issue Quantity

Specifies the Requested Quantity in terms of the UI.

## Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	Numeric (N)

## Unit of Measure (UM)

The standard by which an item is determined, depending upon what the code is being used for.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	2
<b>Data Type:</b>	Alpha-Numeric (A/N)

## Unit Outstanding Quantity

The amount of a MIL that the unit or individual already has, so they do not ask for more than they are allotted.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	10
<b>Data Type:</b>	Alpha-Numeric (A/N)

## Unit Pack

The first tie, wrap or container applied to a single item or a quantity thereof, or to a group of items of a single stock number, preserved or unpreserved, which constitutes a complete or identifiable package.

A unit pack is also often referred to as a package or merely as a pack.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	Alpha-Numeric (A/N)

## Unit Pack Price

The cost of the first grouping of items of a single stock number, which constitutes a complete or identifiable package.

For example, if the Unit Price of a battery was \$1.50, and the Unit Pack of that same battery was 10, then the Unit Pack Price would be \$15.00.

### Field Details:

<b>DPAS References:</b>

## Unit Price

The cost of an asset for the quantity based on the unit of issue.  
Requisition – The dollar price per unit of the Stock Number.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	15
<b>Data Type:</b>	Numeric (N)

# Unit Price Threshold

The threshold cost of an asset for the quantity based on the unit of issue. It alerts the ICP when the stock item reaches that price.

## Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	Numeric (N)

## Unit Type Code

The task the Air Force Unit has been assigned.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	6
<b>Data Type:</b>	Alpha-Numeric (A/N)

## Unit Weight

A data field indicating the maximum gross weight of the unit pack.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	7
<b>Data Type:</b>	Numeric (N)

## Universal Product Code (UPC)

The Universal Product Code (UPC) is a barcode symbology (i.e., a specific type of barcode) for tracking trade items.

Its most common form consists of 12 numerical digits, which are uniquely assigned to each trade item.

### Field Details:

<b>DPAS References:</b>

<b>Data Type:</b>	Numeric (N)

# Unprocessed Quantity

The quantity remaining to be processed during the return.  
 The return process starts with the outstanding quantity as the unprocessed quantity.  
 As materiel is returned or identified as not returned, the unprocessed quantity is updated.  
 The return/not-return is moved to the Pending tab.

## Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	Numeric (N)

## Unserviceable (Condemned)

Materiel determined to be unserviceable and does not meet repair criteria.

This includes items that are radioactively contaminated, items that are type I and have passed the expiration date, and items that are type II that have passed the expiration date (and it cannot be extended).

Must contain any components or assemblies to be reclaimed.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	Alpha-Numeric (A/N)

# Unserviceable (Incomplete)

Materiel requiring additional parts (B II) or components (non-functional) to complete the end item prior to issue.

## Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	Alpha-Numeric (A/N)

## Unserviceable (Limited Restoration)

Material which involves only limited expense or effort to restore to serviceable condition, and is accomplished in the current storage facility.  
 May be issued to support ammunition requisitions coded to indicate acceptability of usable Supply Condition Code E stock.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	Alpha-Numeric (A/N)

## Unserviceable (Reclamation)

Materiel determined to be unserviceable, or uneconomically repairable (as a result of physical inspection, tear down, or engineering decision).  
 However, the item contains serviceable components or assemblies that can be reclaimed.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	Alpha-Numeric (A/N)

## Unserviceable (Reparable)

Economically reparable materiel which involves repair, overhaul, or reconditioning to restore to serviceable condition.  
 This includes reparable items that are radioactively contaminated.

### Field Details:

<b>DPAS References:</b>	
<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	Alpha-Numeric (A/N)

## Unserviceable (Scrap)

Material that has no value, except for its basic material content.  
 Not recorded as on hand, and not transferred anywhere except disposal, and not reordered.  
 Only for transactions involving shipments to Defense Re-utilization and Marketing Office (DRMO).

### Field Details:

<b>Field Structure:</b>	
<b>Field Length:</b>	
<b>Data Type:</b>	

**Utilization (Utilize)(Used) No Preference**

Indicates to no primary specification for utilize on base.  
 For assets with meters, record the utilization while the asset was on base.

**Field Details:**

<b>DPAS References:</b>	
<b>Field Structure:</b>	#.# #
<b>Field Length:</b>	7
<b>Data Type:</b>	Numeric (N)

## Utilization (Utilize)(Used) Off Base

For assets with meters, record the utilization while the asset was off base.  
 Can be set as default on the Preferences page.

# Wide Area Work Flow (WAWF) Import Process

## Introduction

Wide Area Workflow (WAWF) is used for many purposes. The Defense Property Accountability System (DPAS) WAWF interface process imports notification records, called Property System Notifications (PSNs), that are generated by WAWF. These transactions are sent to DPAS by sending data through the Global Exchange (GEX).

The interface, although transparent to and not seen by DPAS users, is important in two DPAS functions:

- Asset Receiving
- Asset Transfers

It is also recommended that WAWF be checked prior to adding a stock number to a DPAS Catalog. Users should search both the DPAS Catalog and the WAWF to verify whether the stock number in WAWF exists and is in a usable format (since WAWF stock number structures fall in different categories, e.g., National Stock Numbers (NSNs) and color).

The Unit Identification Code (UIC)/Department of Defense Activity Address Code (DoDAAC) must be both valid and recognized in DPAS. Otherwise, the import transaction is rejected in DPAS.

Login to the WAWF requires use of a Common Access Card (CAC) reader and an account separate from the log in for DPAS. Refer to the section on WAWF security for users, access and privileges below.

In order to use the WAWF itself, some preliminary steps must be taken by individual user Activities – often by the Accountable Property Officer (APO) – to register with WAWF. The APO ensures that only data belonging to the Activity is received.

If your Activity does not currently use WAWF, you must first establish a WAWF account, as described below. See the Wide Area Work Flow web site, <https://wawf.eb.mil>, for more information.

## Explanation

PSNs in this process are generated when the Government accepts a shipment from a vendor for new procurements, as well as when property transfers occur between Government entities or

between contractors (Return of Government Furnished Property). Currently, DPAS accepts and extracts from WAWF only those PSNs designated as 'AS' (i.e., new procurements).

In another process, individual unique identifications (IUIDs) are passed to the Unique Identification (UID) Registry maintained by the Department of Defense.

The PSNs update DPAS with required data elements pertaining to acquisitions or transfers. Initially, only PSNs containing Unique Item Identifiers (UIIs) are routed to the DPAS property book; these PSNs are routed to DPAS Unit Identification Codes (UICs) that have recognized DoDAACs.

### Why Use the WAWF Interface

Why Use the WAWF Interface

- Improved accuracy and efficient posting of information to the property book.
- Automatic updating of the IUID Registry.
- Vendors supplying government equipment Contract Line Items (CLINs) are paid more quickly.

### Discussion

For new acquisitions, a vendor initiates the process by creating a WAWF Receiving Report (RR) using either:

- Electronic Data Interchange (EDI)
- Secure File Transfer Protocol (SFTP)
- Web entry

This RR is routed to a Government Acceptor who is assigned that role in WAWF. The appropriate data elements are extracted from the PSNs and used in DPAS to create 'Due-Ins' for the property manager. Once the DPAS property manager has received the assets, the 'Due In' established for that shipment can be used to post the assets to the property book.

### Explanation of the WAWF interface used in conjunction with DPAS

Currently, DPAS uses one-half of the types of numbering available in WAWF as stock numbers:

- Federal Supply Classes (FSCs)
- National Stock Numbers (NSNs)
- Manufacturer Part Numbers
- Serial Numbers

When the DPAS Activity using WAWF desires to receive PSNs, the Activity has WAWF updated to identify the property system that is aligned with one or more of the following offices/persons:

- Ship To Point – Ship To DoDAAC
- Property Receiver – DoDAAC/CAGE Cd, and/or
- Property Administrator – DoDAAC

## Help Reference Guide

This setup is critically important to having PSNs generated and correctly routed to DPAS. Prior to contacting the WAWF administrator, the DPAS user should know that the Receiving Activity Code (RAC) is DPAS.

Any/all stock number(s) being imported by using the WAWF process must already exist on a Catalog within DPAS. If not, the User receives an error message. No field data is accepted directly into DPAS without first being placed on the DPAS Pending Table records found in the Asset Receiving portion of DPAS. For a given PSN, there should be data elements populated on the Due-In Pending Table.

A PSN record without a readable data element associated with the assets is written to the WAWF Exception Table with the status of 'rejected'. You can view:

- The WAWF Interface Report for the rejected file.
- The Pending Supply Actions Report for data elements.
- The Inquiries for data elements.

Currently, the data elements in DPAS that can be populated with information received from the WAWF PSN fields are:

DPAS Field Name	Length
<b>Catalog Stock Number</b>	15
<b>Serial Number</b>	20
<b>Acquisition Cost</b>	15
<b>Quantity</b>	6
<b>Contract/Purchase Order Number</b>	13
<b>Lot Nbr</b>	20
<b>Item Unique Identification (IUID)</b>	50
<b>Acquisition Date</b>	8

DPAS Field Name	Length
<b>Received By</b>	N/A
<b>Item Description</b>	1024
<b>Manufacturer Name</b>	36
<b>Manufacturer Model Number</b>	N/A
<b>Manufacturer Part Number</b>	36
<b>Contract Line Item Number (CLIN)</b>	4
<b>Line Of Accounting Account Class Reference Number (ACRN)</b>	2
<b>Commercial and Government Entity Code (CAGE Cd)</b>	5

### Notes on IUID

- If the IUID is present, the Asset information should be passed to the Pending Due-In Table.
- If no IUID is present, the Record information is sent to the Rejected Table or File.

### Notes on the WAWF

- The DoDAAC can contain an 'extension' of up to six (6) characters.
  - When the shipper inputs a DoDAAC with an extension, and the DoDAAC-Extension is identified with a RAC, a PSN is generated and routed to that RAC.
  - However, if the shipper
    - Inputs a DoDAAC with an extension.
    - The DoDAAC Extension is not identified with a RAC, while the DoDAAC without the extension is identified with a RAC; a PSN is generated and routed to the RAC identified with that DoDAAC.
  - If neither is identified with a RAC, no PSN is generated.
- When a vendor is ready to deliver an order for new assets to the Federal Government for goods/services, the vendor creates a shipment notice in the WAWF.

## Help Reference Guide

- The shipment notice may include a mix of services, supplies, Materiels, assets, etc., that may or may not contain a UII.
- These PSN WAWF transactions are the 'AS' type.
- Once the WAWF Government Acceptor accepts the shipment, WAWF generates one or more PSNs, which is then routed to DPAS via GEX.
- PSNs are generated for all receipts regardless of cost or type of activity.
  - For each shipment notice the Government receipts/accepts, a PSN is generated by WAWF to the GEX.
  - GEX presents each shipment as a single file.
  - DPAS applies filters to the data in attempt to exclude those transactions that are not applicable to Property Book (Supplies, Services, etc).
- It is envisioned that the GEX pushes the PSNs to DPAS in an XML format over a secure network.
  - DPAS has a WAWF/GEX folder to hold inbound files.
  - As the folder receives data, data is processed in the background.

### Error Handling

The DPAS Application Administrator is responsible for monitoring the Interface Reports for errors and contacting the appropriate DPAS staff for assistance with problem resolution. A WAWF activity report is generated daily for the application administrator and others that have a need to view it. Refer to the PSN Import Status Report.

Whenever a DPAS user was expecting a PSN, and it was not received, the resolution procedures are as follows:

- Contact the DPAS Helpdesk and provide particulars of the transaction, such as:
  - Shipment Notice Number
  - Shipment Notice Date
  - Date of Acceptance by Government
  - Acceptance Location (DoDAAC)
- Should DPAS be unable to locate the transaction, the DPAS user contacts the WAWF representative providing the same information.
- Whenever the WAWF representative locates the entry, and it shows that a PSN was generated, the WAWF representative should open a trouble ticket with GEX to determine why the transaction was not sent to DPAS.

### Instructions for User Sign-Up for WAWF

When the DPAS activity using WAWF desires to receive PSNs, it is necessary to update WAWF to identify the property system that is aligned with one or more of the following DoDAAC Code (s):

## Help Reference Guide

- The update is accomplished by contacting the WAWF Program Management Officer (PMO), and providing DPAS DoDAACs and corresponding RACs for the instance of DPAS ready to receive PSNs. The WAWF PMO has a database script written to add the DoDAAC (s) and corresponding RAC under the DPAS in the WAWF PSN table. This setup is 'key' to having PSNs generated and correctly routed to the DPAS; and
- Ensure that the DoDAACs currently assigned in DPAS are valid DoDAACs and recognized in DPAS. DoDAACs can be validated at the following website:  
<https://www.daas.dla.mil/daasing/>. DoDAACs not contained in the Defense Automatic Addressing System (DAAS) Master File cannot be processed. If you wish to add a DoDAAC that is not in the Master File, contact the Department of Defense Activity Address Directory (DoDAAD) Focal Point for your Agency/Department.
- If you add an entirely new DoDAAC, delete an invalid DoDAAC, or make a change to an existing DoDAAC, remember to make the appropriate update in DPAS.

In the future, it is expected that PSNs designated as 'TS' (i.e., transfers) will be extracted into DPAS from WAWF.

See the discussion of the WAWF on the WAWF website: <https://wawf.eb.mil/>.

### WAWF security for users, access and privileges

Users request access to a DoDAAC (vendors request access to a CAGE Cd) during self-registration. Users fill in a Form 41 (DD 2875), signed by their supervisor and approved by the WAWF POC (for the government). For vendors, their Electronic Business POC signs the Form 41.

See registration instructions on the WAWF home page for more details <https://wawf.eb.mil/>. Once activated, users only see documents for the authorized DoDAAC(s) or CAGE Cd(s).

### Accessibility

The pages on the Defense Property Accountability System (DPAS) web-site are developed to be accessible to individuals with disabilities, in accordance with Section 508 of the Rehabilitation Act of 1973, as amended-29 U.S.C. § 794.

Specifically, the pages have been developed to comply with the following 508 web site accessibility requirements developed by the Architectural and Transportation Barriers Compliance Board (The Board) and published by the W3C as worldwide accessibility standards.

These requirements are based upon the Final Rule as Published in the Federal Register on December 21, 2000 at 36 CFR Part 1195 [Docket No. 2001-01] RIN 3014-AA25 and as published in The Board's on-line guide to the standards for Web-based Intranet and Internet Information and Applications (1194.22).

These requirements include the following:

A text equivalent for every non-text element shall be provided (e.g., via "alt," "longdesc," or in element content).

Equivalent alternatives for any multimedia presentation shall be synchronized with the presentation.

Web pages shall be designed so that all information conveyed with color is also available without color, for example from context or markup.

Documents shall be organized so they are readable without requiring an associated style sheet.

Redundant text links shall be provided for each active region of a server-side image map.

Client-side image maps shall be provided instead of server-side image maps except where the regions cannot be defined with an available geometric shape.

Row and column headers shall be identified for data tables.

Markup shall be used to associate data cells and header cells for data tables that have two or more logical levels of row or column headers.

Frames shall be titled with text that facilitates frame identification and navigation.

Pages shall be designed to avoid causing the screen to flicker with a frequency greater than 2 Hz and lower than 55 Hz.

A text-only page, with equivalent information or functionality, shall be provided to make a web site comply with the provisions of these standards, when compliance cannot be accomplished in any other way. The content of the text-only page shall be updated whenever the primary page changes.

When pages utilize scripting languages to display content, or to create interface elements, the information provided by the script shall be identified with functional text that can be read by assistive technology.

When a web page requires that an applet, plug-in or other application be present on the client system to interpret page content, the page must provide a link to a plug-in or applet that complies with §1194.21(a) through (l).

When electronic forms are designed to be completed on-line, the form shall allow people using assistive technology to access the information, field elements, and functionality required for completion and submission of the form, including all directions and cues.

A method shall be provided that permits users to skip repetitive navigation links.

When a timed response is required, the user shall be alerted and given sufficient time to indicate more time is required.

If you have trouble using this site, report the issue to the point of contact listed on the Contact Us page.

## Consent To Monitoring

This is a U.S. Government (USG) Information System (IS) that is provided for USG-authorized use only.

By using this IS (which includes any device attached to this IS), you consent to the following conditions:

The USG routinely intercepts and monitors communications on this IS for purposes including, but not limited to, penetration testing, communications security (COMSEC) monitoring, network operations and defense, personnel misconduct (PM), law enforcement (LE), and counterintelligence (CI) investigations.

At any time, the USG may inspect and seize data stored on this IS.

Communications using, or data stored on, this IS are not private, are subject to routine monitoring, interception, and search, and may be disclosed or used for any USG authorized purpose.

This IS includes security measures (e.g., authentication and access controls) to protect USG interests — not for your personal benefit or privacy.

Notwithstanding the above, using this IS does not constitute consent to PM, LE or CI investigative searching or monitoring of the content of privileged communications, or work product, related to personal representation or services by attorneys, psychotherapists, or clergy, and their assistants.

Such communications and work product are private and confidential.
