

Web Defense Property Accountability System (DPAS) LIN/TAMCN

What is the LIN/TAMCN?

The Line Item Number (LIN)/Table of Authorized Material Control Number (TAMCN) is used for designating a family of stock numbers for authorizations.

Agencies will be able to define whether the LIN/TAMCN is mandatory or optional and the construct/format of the LIN/TAMCN by the Catalog name.

What is the Format for a LIN/TAMCN?

Edits for the LIN/TAMCN are tied to a Catalog, which is associated with the site the user is logged into. The Agency can decide which edit they want attached with their Catalog. Edits that the Agency can choose from, but are not limited to, are as follows:

2. Enter the LIN/TAMCN you wish to update.

If you only know a portion of the information you are seeking (for example, you only know that you are searching for an entry with "X38" somewhere in the LIN/TAMCN), enter that and use *wildcards* to fill in the blanks.

A *wildcard* is a character that can be substituted for letters, groups of letters, words or entire sentences. The **DPAS wildcard** character is the "%" (percent sign). It is used throughout the application so this would be a good piece of information to place in your memory bank!

3. Select the **Search** button.
