

Defense Property Accountability System (DPAS) Unique Item Identifier (UII) Status Codes (UII Sts Cds)

DPAS UII Status Cds

- **ANT – Tagged Not Recorded** - UII is assigned but not recorded in DPAS and asset is tagged with a UII label.
- **ANN – Assigned Only** - UII is assigned and is not recorded in DPAS and asset is not tagged with UII label.
- **ART – Recorded and Tagged** - UII is assigned and exists in the UID registry, recorded in DPAS and asset is tagged with UII label.
- **ARN – UII is assigned and exists in the UID registry** - UII is recorded in DPAS and asset is not tagged with UII label. Once ARN is assigned, you can only update the UII STS Cd to ART.
- **NNN – Assign Virtual UII** - Used when asset meets UII criteria, UII is not assigned, not recorded in DPAS, and asset is not tagged with UII label.
 - Assets will stay in NNN status until DPAS has generated the virtual UII and reported it to the IUID Registry. The code will be automatically updated to ARN if the process is successful.
 - DPAS will check the IUID Registry to verify the UII was added. If not verified within six days, the NNN status will change to E02 (see below).
- **NDT – Not Determined** - Used when unable to validate status. This code should later be updated to possible choices of ANN, ANT, or NNN.
- **DMC – Asset does not meet criteria for UII labeling** - DMC code is created by DPAS when a Non-Accountable Asset record is created.

Other UII Status Codes only found in DPAS UII Inquiry:

- **E00 – Invalid UII Format** -UII migrated into DPAS but has incorrect UII format – User should request DPAS remove the UII.
- **E01 – UII Already recorded** - UII is recorded in IUID Registry.
- **E02 – Not Found in Registry** - DPAS will work with the IUID Registry team to determine why the UII is not on the registry. However, it is up to the Agency POC to correct the problem.

For assets with an assigned UII:

Code	1 st Position	2 nd Position	3 rd Position
	Assigned	Recorded	Tagged
ART	X	X	X
ARN	X	X	
ANT	X		X
ANN	X		

For assets without an assigned/identified UII:

Code	Description
NNN	Assign Virtual UII
NDT	Not Determined
DMC	Does Not Meet Criteria
