## Effective Date

30 July 2021

## Release Notes Overview

Release 2021.2.3.1 for the Defense Property Accountability System (DPAS) was released on July 30, 2021. This release corrects program deficiencies identified by the user community. The update impacts the Maintenance and Utilization module.

## Maintenance and Utilization (M&U) Module

### Help Tickets

The following Maintenance and Utilization Help Tickets were closed by this release:

#### *Work Order AU (WPMAN12)*

##### Help Ticket #56320

- Corrected a deficiency involving the Service End Date of a Sub Work Order so that the last Maintenance Date only uses the Service End Date of the Sub Work Order that is associated with the Maintenance Schedule ID. The oldest date is still used in the event of multiple Sub Work Orders associated with the Maintenance Schedule ID.

##### TFS ID #75487

- Corrected a deficiency when a Preventative Maintenance Work Order status was set to void, the system corrects it as if it never occurred, thus when the background job runs another work order is created.

##### Help Ticket #56321

- Corrected a deficiency so that every time the Asset Last Maintenance Date is updated, the work order background job recalculates by using the Asset Last Maintenance Date plus the Interval to calculate the Asset Next Maintenance Date to reflect accordingly in the system.
