Release 3.0.01 for the Defense Property Accountability System (DPAS) was released on June 02, 2015. This release corrects program deficiencies identified by the user community and through testing by the development teams. There is no action required by the user to receive the update.

This release contains the following System Change Request (SCR):

Warehouse Management Report Manager

- Report Manager
 - The following reports were added in Report Manager for Administration Management: User Tier History, User History, User Role History, and Deleted Users History. Reports are only available for the Security User role (SCR #00776).

This release contains the following corrections to the following User reported issues:

Property Accountability Module:

Maintain Users AUD

- User Add/Update/Delete (AUD)
 - The Account Management Team reported a deficiency that caused slow application performance when attempting to create a new DPAS account. Triggers were modified which improved application performance. (Remedy #116201).

Asset Receiving

- Asset Receiving
 - Users reported an error message when attempting to mass upload received assets if no attachments were included. The code was modified to allow the uploading of the spreadsheet (Remedy #116250, #116341, #116335).

WAWF Inbound XML Import

- WAWF Inbound XML Import
 - Error was detected with XML between DPAS and WAWF preventing inbound WAWF transactions from being processed. This discrepancy was resolved in the DPAS Administrator Console (DAC) jobs in preparation for WAWFs release of their new 5.7 schema on 8 June 2015.

Warehouse Management Module:

MyDPAS

- Account Information
 - Only roles with Completion Dates assigned were displayed under the Training Status tab for the user. The code was modified to display all roles requiring completion of training.

Issue/Return Inquiry

- Issue/Return Inquiry
 - Users reported receiving "Export Error" when selecting Export from the Grid Options for the results of this inquiry. The code was modified to allow the export to successfully complete and allow the user to either view or download the spreadsheet (Remedy #116295).

Quality Control

- Quality Control (QC)
 - It was reported that when a QC request was created from the Sets, Kits and Outfits (SKO) Assembly program, it could not be completed due to an error stating "inventory records are not found". It was determined that this was due to an incorrect check on the Condition Code of the kit components. This check was corrected, thus resolving the issue.

Individual Return

- Individual Return
 - Users reported receiving an error message when signing the acknowledgement for an Individual Return. It was discovered that data required to create a process message was missing, causing this error. The code was modified to allow completion of the Individual Return process (Remedy # 116400).

Receiving

- Receiving
 - Users reported an error message when updating a receipt of a Warehouse Transfer, completing the Verify and Accept processes of Warehouse Receiving. It was determined the Received Quantity was not getting populated and carried over properly. Once this was resolved, standard Warehouse Transfers were able to be verified normally (Remedy # 116401).
